The documentation and process conversion measures necessary to comply with this document shall be completed by 12 December 2017.

The requirements for acquiring the product described herein shall consist of this specification sheet and MIL-PRF-19500.

1. SCOPE

1.1 Scope. This specification covers the performance requirements for low-power, PNP, silicon 2N2944A, 2N2945A, 2N2946A transistors for use in high-speed, switching and general purpose amplifier applications. A 'M' and UB 'M' suffix will indicate a matched pair. Four levels of product assurance are provided for each encapsulated device type as specified in MIL-PRF-19500, and two levels of product assurance are provided for each unencapsulated device type. Provisions for radiation hardness assurance (RHA) to eight radiation levels is provided for quality levels JANTX, JANS, JANHC, and JANKC. RHA level designators "M", "D", "P", "L", "R", "F", "G", and "H" are appended to the device prefix to identify devices, which have passed RHA requirements.

1.2 Package and die outlines. The device package for the encapsulated device type are as follows: TO-46 in accordance with figure 1 and surface mount in accordance with figure 2. The dimensions and topography for JANHC and JANKC unencapsulated die are in accordance with figure 3.

1.3 Maximum ratings. Unless otherwise specified, \( T_a = +25 \, ^\circ\text{C} \).

1.5 Part or Identifying Number (PIN). The PIN is in accordance with MIL-PRF-19500, and as specified herein. See 6.5 for PIN construction example and 6.6 for a list of available PINs.

1.5.1 JAN brand and quality level designators.

1.5.1.1 Quality level designators for encapsulated devices. The quality level designators for encapsulated devices that are applicable for this specification sheet from the lowest to the highest level are as follows: “JAN”, “JANTX”, “JANTXV”, and “JANS”.

1.5.1.2 Quality level designators for unencapsulated devices (die). The quality level designators for unencapsulated devices (die) that are applicable for this specification sheet from the lowest to the highest level are as follows: “JANHC” and “JANKC”.

1.5.2 Radiation hardness assurance (RHA) designator. The RHA levels that are applicable for this specification sheet from lowest to highest are as follows: “M”, “D”, “P”, “L”, “R”, “F”, “G”, and “H”).

1.5.3 Device type. The designation system for the device types of transistors covered by this specification sheet are as follows.

1.5.3.1 First number and first letter symbols. The transistors of this specification sheet use the first number and letter symbols “2N”.

1.5.3.2 Second number symbols. The second number symbols for the transistors covered by this specification sheet are as follows: “2944”, “2945”, and “2946”.

1.5.4 Suffix symbols. The following suffix symbols are incorporated in the PIN as applicable.

1.5.4.1 First suffix symbol. The first suffix symbol “A” indicates that the switching transistor is a modified version of the approved device type.

1.5.4.2 Following suffix symbols. The following suffix symbols are incorporated in the PIN for this specification sheet:

<table>
<thead>
<tr>
<th>Suffix</th>
<th>Description</th>

<tr>
<td>AUB</td>
<td>Indicates a 4 pad surface mount package (see figure 2).</td>
</tr>
<tr>
<td>AUBM</td>
<td>Indicates a matched pair 4 pad surface mount package. (See figure 2).</td>
</tr>
</tbody>
</table>

1.5.5 Lead finish. The lead finishes applicable to this specification sheet are listed on QML-19500.

1.5.6 Die identifiers for unencapsulated devices (manufacturers and critical interface identifiers). The manufacturer die identifier that is applicable for this specification sheet is “A” (see figure 3 and 6.5).

NOTES:

1. Dimensions are in inches.
2. Millimeters are given for general information only.
3. Symbol TL is measured from HD maximum.
4. Details of outline in this zone are optional.
5. Leads at gauge plane .054 inch (1.37 mm) +.001 inch (0.03 mm) -.000 inch (0.00 mm) below seating plane shall be within .007 inch (0.18 mm) radius of TP relative to tab. Device may be measured by direct methods or by gauge.
7. Lead number three is electrically connected to case.
8. Beyond r maximum, TW shall be held for a minimum length of .011 inch (0.28 mm).
9. Symbol r applied to both inside corners of tab.
10. In accordance with ASME Y14.5M, diameters are equivalent to φx symbology.
11. Lead 1 is emitter, lead 2 is base, and lead 3 is collector.

2. APPLICABLE DOCUMENTS

2.1 General. The documents listed in this section are specified in sections 3 and 4 of this specification. This section does not include documents cited in other sections of this specification or recommended for additional information or as examples. While every effort has been made to ensure the completeness of this list, document users are cautioned that they must meet all specified requirements of documents cited in sections 3 and 4 of this specification, whether or not they are listed.

2.2 Government documents.

2.2.1 Specifications, standards, and handbooks. The following specifications, standards, and handbooks form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

DEPARTMENT OF DEFENSE SPECIFICATIONS

DEPARTMENT OF DEFENSE STANDARDS

(Copies of these documents are available online at http://quicksearch.dla.mil.)

2.3 Order of precedence. Unless otherwise noted herein or in the contract, in the event of a conflict between the text of this document and the references cited herein, the text of this document takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 General. The individual item requirements shall be as specified in MIL-PRF-19500 and as modified herein.

3.2 Qualification. Devices furnished under this specification shall be products that are manufactured by a manufacturer authorized by the qualifying activity for listing on the applicable qualified manufacturers list before contract award (see 4.2 and 6.3).

3.3 Abbreviations, symbols, and definitions. Abbreviations, symbols, and definitions used herein shall be as specified in MIL-PRF-19500 and as follows.

\begin{itemize}
  \item \textbf{hFE (inv)}: Forward-current transfer ratio except that the collector and emitter shall be interchanged in the test circuit, i.e., \(\frac{I_E}{I_B}\).
  \item \textbf{I_e}: Emitter current (rms).
  \item \textbf{M}: Matched pair.
  \item \textbf{r_{ec(on)}}: Small-signal emitter-collector on-state resistance.
  \item \textbf{R_{JSP}}: Thermal resistance junction to solder pads.
  \item \textbf{V_{BR(ECO)}}: Breakdown voltage, emitter to collector, with base open-circuited.
  \item \textbf{V_{EC(ofs)}}: Emitter to collector offset voltage, i.e., open-circuit voltage between emitter collector when the base-collector junction is forward-biased.
  \item \textbf{V_{ec}}: Emitter to collector voltage (rms).
\end{itemize}
3.4 Interface and physical dimensions. The interface and physical dimensions shall be as specified in MIL-PRF-19500, and herein. The device package styles shall be as follows: Three pin metal can (similar to TO-46) in accordance with figure 1, four pad surface mount case outline in accordance with figure 2, and unencapsulated die in accordance with figure 3 for device types JANHC and JANKC.

3.4.1 Lead finish. Lead finish shall be solderable in accordance with MIL-PRF-19500, MIL-STD-750, and herein. Where a choice of lead finish is desired, it shall be specified in the acquisition document (see 6.2).

3.5 Radiation hardness assurance (RHA). Radiation hardness assurance requirements and test levels shall be as defined in MIL-PRF-19500.

3.6 Electrical performance characteristics. Unless otherwise specified herein, the electrical performance characteristics are as specified in 1.3, 1.4, and table I.

3.7 Marking.

3.7.1 Through hole mount packages. Marking shall be in accordance with MIL-PRF-19500.

3.7.2 Surface mount packages. Marking shall be in accordance with MIL-PRF-19500. The marking on the UB and UBM packages shall consist of an abbreviated part number, the date code, and the manufacturer’s symbol or logo. The prefixes JAN, JANTX, JANTXV and JANS can be abbreviated as J, JX, JV, and JS respectively. The “2N” prefix and the “UB” suffix can also be omitted. The radiation hardened designator shall immediately precede (or replace) the device “2N” identifier (depending upon degree of abbreviation required).

3.8 Workmanship. Semiconductor devices shall be processed in such a manner as to be uniform in quality and shall be free from other defects that will affect life, serviceability, or appearance.

4. VERIFICATION

4.1 Classification of inspections. The inspection requirements specified herein are classified as follows:

a. Qualification inspection (see 4.2).

b. Screening (see 4.3).

c. Conformance inspection (see 4.4 and table I and II).

4.2 Qualification inspection. Qualification inspection shall be in accordance with MIL-PRF-19500 and as specified herein.

4.2.1 JANHC and JANKC qualification. JANHC and JANKC qualification inspection shall be in accordance with MIL-PRF-19500.

4.2.2 Group E qualification. Group E inspection shall be performed for qualification or re-qualification only. In case qualification was awarded to a prior revision of the specification sheet that did not request the performance of table III tests, the tests specified in table III herein that were not performed in the prior revision shall be performed on the first inspection lot of this revision to maintain qualification.
4.3 Screening.

4.3.1 Screening of encapsulated devices (quality levels JANS, JANTX, and JANTXV only). Screening of encapsulated devices shall be in accordance with table E-IV of MIL-PRF-19500 and as specified herein. The following measurements shall be made in accordance with table I herein. Devices that exceed the limits of table I herein shall not be acceptable.

<table>
<thead>
<tr>
<th>Screen</th>
<th>Measurement</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.3c</td>
<td>Required, method 3131 of MIL-STD-750. (see 4.3.1.2)</td>

<tr>
<td>9</td>
<td>$I_{CBO1}$ and $h_{FE} \text{ (inv)}$; $\Delta I_{CBO1} = 100$ percent of initial value or 0.2 nA dc for 2N2944A, 2N2945A, 2N2945AM, 2N2945AUB, and 2N2945AUBM. 0.5 nA dc for 2N2946A; $\Delta h_{FE} \text{ (inv)} = 25$ percent of initial value.</td>
</tr>
<tr>
<td>11</td>
<td>Not applicable</td>
</tr>
<tr>
<td>12</td>
<td>See 4.3.1.1.</td>
</tr>
<tr>
<td>13</td>
<td>Subgroups 2 and 3 of table I herein; $\Delta I_{CBO1} = 100$ percent of initial value or 0.2 nA dc for 2N2944A, 2N2945A, 2N2945AM, 2N2945AUB, and 2N2945AUBM. 0.5 nA dc for 2N2946A; $\Delta h_{FE} \text{ (inv)} = 25$ percent of initial value.</td>
</tr>
</tbody>
</table>

(1) Shall be performed any time after temperature cycling, screen 3a; JANTX and JANTXV levels do not need to be repeated in screening requirements.

4.3.1.1 Power burn-in conditions. Power burn-in conditions are as follows: $V_{CB} = 10$ to 30 V dc. Power shall be applied to achieve $T_J = +135^\circ C$ minimum using a minimum $P_0 = 75$ percent of $P_T$ maximum rated as defined in 1.3. With approval of the qualifying activity and preparing activity, alternate burn-in criteria (hours, bias conditions, $T_J$, and mounting conditions) may be used for JANTX and JANTXV quality levels. A justification demonstrating equivalence is required. In addition, the manufacturing site’s burn-in data and performance history will be essential criteria for burn-in modification approval. Use method 3100 of MIL-STD-750 to measure $T_J$.

4.3.1.2 Thermal impedance. The thermal impedance measurements shall be performed in accordance with method 3131 of MIL-STD-750 using the guidelines in that method for determining $I_M$, $I_H$, $b_H$, $b_M$, and $V_C$ where appropriate.
4.3.2 Screening of unencapsulated die (JANHC and JANKC). Screening of JANHC and JANKC unencapsulated die shall be in accordance with appendix G of MIL-PRF-19500. The burn-in duration of the JANKC level shall follow the JANS requirements, the JANHC level shall follow the JANTX requirements of table E-IV of MIL-PRF-19500.

4.4 Conformance inspection. Conformance inspection shall be in accordance with MIL-PRF-19500, and as specified herein.

4.4.1 Group A inspection. Group A inspection shall be conducted in accordance with MIL-PRF-19500 and table I herein.

4.4.2 Group B inspection.

4.4.2.1 Quality level JANS, table E-VIA of MIL-PRF-19500. Group B inspection shall be conducted in accordance with the tests and conditions specified for subgroup testing in table E-VIA (JANS) of MIL-PRF-19500. Delta requirements only apply to subgroups B4 and B5 and shall be in accordance with 4.5.6 herein.

2,000 cycles. No heat sink or forced air cooling on the devices shall be permitted. \( V_{CB} = 10 \text{ V dc. } t_{on} = t_{off} = 3 \text{ minutes, power} = 400 \text{ mW.} \)

\( V_{CB} = 10 \text{ V dc. } P_{D} \geq 100 \text{ percent of maximum rated } P_{T} \text{ (see 1.3). (NOTE: If a failure occurs, resubmission shall be at the test conditions of the original sample).} \)

Option 1: 96 hours minimum, sample size in accordance with table VIa of MIL-PRF-19500, adjust \( T_A \) or \( P_D \) to achieve \( T_J = +275^\circ \text{C minimum.} \)

Option 2: 216 hours, sample size = 45, \( c = 0 \); adjust \( T_A \) or \( P_D \) to achieve \( T_J = +225^\circ \text{C minimum.} \)

4.4.2.2 Quality levels JAN, JANTX, and JANTXV, table E-VIB of MIL-PRF-19500. Separate samples may be used for each step. In the event of a lot failure, the resubmission requirements of MIL-PRF-19500 shall apply. In addition, all catastrophic failures during CI (conformance inspection) shall be analyzed to the extent possible to identify root cause and corrective action. Whenever a failure is identified as wafer lot and/or wafer processing related, the entire wafer lot and related devices assembled from the wafer lot shall be rejected unless an appropriate determined corrective action to eliminate the failure mode has been implemented and the devices from the wafer lot are screened to eliminate the failure mode. Delta requirements for JAN, JANTX, and JANTXV shall be after each step and shall be in accordance with 4.5.6 herein.

<table>

</table>
4.4.2.3 **Group B sample selection.** Samples selected from group B inspection shall meet all of the following requirements:

a. For JAN, JANTX, and JANTXV samples shall be selected randomly from a minimum of three wafers (or from each wafer in the lot) from each wafer lot. For JANS, samples shall be selected from each inspection lot. See MIL-PRF-19500.

b. Shall be chosen from an inspection lot that has been submitted to and passed table I, subgroup 2, conformance inspection. When the final lead finish is solder or any plating prone to oxidation at high temperature, the samples for life test (subgroups B4 and B5 for JANS, and group B for JAN, JANTX, and JANTXV) may be pulled prior to the application of final lead finish.

4.4.3 **Group C inspection.** Group C inspection shall be conducted in accordance with the tests and conditions specified for subgroup testing in table E-VII of MIL-PRF-19500, and 4.4.3.1 (JANS), and 4.4.3.2 (JAN, JANTX, and JANTXV) herein for group C testing. Delta requirements shall be in accordance with table I, subgroup 2 and 4.5.6 herein.

<td>Steady-state life: 1,000 hours, $V_{CB} = 10$ V dc; power shall be applied to achieve $T_J = +150^\circ C$ minimum and a minimum of $P_D = 75$ percent of maximum rated $P_T$ as defined in 1.3  $n = 45, c = 0$. The sample size may be increased and the test time decreased as long as the devices are stressed for a total of 45,000 device hours minimum, and the actual time of test is at least 340 hours.</td>
</tr>
</tbody>
</table>

4.4.3.2 **Quality levels (JAN, JANTX, and JANTXV), table E-VII of MIL-PRF-19500.**

<table>
<thead>
<tr>
<th>Subgroup</th>
<th>Method</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>C2</td>
<td>2036</td>
<td>Test condition E (not applicable to UB).</td>
</tr>
<tr>
<td>C5</td>
<td>3131</td>
<td>$R_{\text{JUA}}$ only, as applicable (see 1.3) and in accordance with thermal impedance curves on figures 6 and 7.</td>
</tr>
<tr>
<td>C6</td>
<td>1037</td>
<td>Not applicable.</td>
</tr>
</tbody>
</table>

4.4.3.3 **Group C sample selection.** Samples for subgroups in group C shall be chosen at random from any inspection lot containing the intended package type and lead finish procured to the same specification which is submitted to and passes table I tests herein for conformance inspection. When the final lead finish is solder or any plating prone to oxidation at high temperature, the samples for C6 life test may be pulled prior to the application of final lead finish. Testing of a subgroup using a single device type enclosed in the intended package type shall be considered as complying with the requirements for that subgroup.

4.4.4 **Group D inspection.** Conformance inspection for hardness assured JANS, and JANTXV types shall include the group D tests specified in table II herein. These tests shall be performed as required in accordance with MIL-PRF-19500 and method 1019 of MIL-STD-750, for total ionizing dose or method 1017 of MIL-STD-750 for neutron fluence as applicable (see 6.2 herein), except group D, subgroup 2 may be performed separate from other subgroups. Alternate package options may also be substituted for the testing provided there is no adverse effect to the fluence profile.
4.4.5 **Group E inspection.** Group E inspection shall be conducted in accordance with the conditions specified for subgroup testing in appendix E, table E-IX of MIL-PRF-19500 and as specified herein. Delta requirements shall be in accordance with table I, subgroup 2 and 4.5.6 herein.

4.5 **Methods of inspection.** Methods of inspection shall be as specified in the appropriate tables and as follows.

4.5.1 **Input capacitance.** This test shall be conducted in accordance with method 3240 of MIL-STD-750, except the output capacitor shall be omitted.

4.5.2 **Emitter to collector breakdown voltage.** Method of test shall be in accordance with method 3011 of MIL-STD-750, test condition D, except that all references to the collector and the emitter of the transistor shall be interchanged.

4.5.3 **Forward-current transfer ratio (inverted connection).** Method of test shall be in accordance with method 3076 of MIL-STD-750, except that all references to the collector and the emitter of the transistor shall be interchanged in the test circuit. Then: \( h_{FE \ (inv)} = I_E / I_B \)

4.5.4 **Emitter to collector offset voltage.** The transistor shall be tested in the circuit of figure 8. The base current shall be adjusted to the specified value. The voltage between the emitter and collector shall then be measured using a voltmeter with an input impedance high enough that halving it does not change the measured value within the required accuracy of the measurement.

4.5.5 **Small-signal emitter-collector on-state resistance.** The transistor shall be tested in the circuit of figure 9. The base current shall be adjusted to the specified value and an ac sinusoidal signal current, \( I_E \), of the specified rms value shall be applied between the emitter and collector. The rms voltage, \( V_{ec} \), between the emitter and collector shall be measured using an ac voltmeter with an input impedance high enough that halving it does not change the measured value within the required accuracy of the measurement. The small-signal emitter-collector on-state resistance shall then be determined as follows:

\[ R_{ec \ (on)} = \frac{V_{ec}}{I_E} \]

Where \( V_{ec} \) is the rms voltage between the emitter and collector.
### MIL-PRF-19500/382L

w/AMENDMENT 1

**4.5.6 Delta requirements.** Delta requirements shall be as specified below. (1) (2) (3) (4)

1/ Tests to be performed on all devices receiving radiation exposure.
2/ For sampling plan, see MIL-PRF-19500.
3/ Electrical characteristics apply to all device types unless otherwise noted.
4/ See 6.2.e herein.
5/ See method 1019 of MIL-STD-750, for how to determine [$h_{FE}$] by first calculating the delta($1/h_{FE}$) from the pre- and post-radiation $h_{FE}$. Notice that [$h_{FE}$] is not the same as $h_{FE}$ and cannot be measured directly. The [$h_{FE}$] value can never exceed the pre-radiation minimum $h_{FE}$ that it is based upon.

NOTES:
1. All devices are capable of operating at ≤ TJ specified on this curve. Any parallel line to this curve will intersect the appropriate power for the desired maximum TJ allowed.
2. Derate design curve constrained by the maximum junction temperature (TJ ≤ 200°C) and power rating specified. (See 1.3 herein.)
3. Derate design curve chosen at TJ ≤ 150°C, where the maximum temperature of electrical test is performed.
4. Derate design curves chosen at TJ ≤ 125°C, and 110°C to show power rating where most users want to limit TJ in their application.

NOTES:

1. All devices are capable of operating at $\leq T_J$ specified on this curve. Any parallel line to this curve will intersect the appropriate power for the desired maximum $T_J$ allowed.

2. Derate design curve constrained by the maximum junction temperature ($T_J \leq 200^\circ$C) and power rating specified. (See 1.3 herein.)

3. Derate design curve chosen at $T_J \leq 150^\circ$C, where the maximum temperature of electrical test is performed.

4. Derate design curves chosen at $T_J \leq 125^\circ$C, and $110^\circ$C to show power rating where most users want to limit $T_J$ in their application.

FIGURE 5. Derating for 2N2944AUB, 2N2945AUB, 2N2945AUBM, and 2N2946AUB (R_{\theta JSP}), base case mounted (UB).
TO-46 free air $T_A = +25^\circ\text{C}$ with 16 x 23 mil chip.

$T_A = +25^\circ\text{C}$, $P_{\text{diss}} = 400 \text{ mW}$, $435^\circ\text{C}/\text{W}$ (ambient thermal resistance varies with power).

FIGURE 6. Thermal impedance graph ($R_{\theta JA}$) for (TO-46).
Thermal resistance = 90°C/W
Solder mounted to heavy copper clad PCB at $T_C = +25^\circ$C.

FIGURE 7. Thermal impedance graph (UB).
FIGURE 8. Emitter to collector offset voltage test circuit.

FIGURE 9. Small-signal emitter to collector on set voltage test circuit.
NOTES:

1. The rise time ($t_r$) and fall time ($t_f$) of the applied pulse shall be $\leq 10$ ns, duty cycle $\leq 2$ percent. The input pulse width shall be 200 ns.

2. Output monitored with an oscilloscope with the following characteristics: $Z_{in} \leq 1$ MΩ, $t_r \leq 1$ ns.

5. PACKAGING

5.1 Packaging. For acquisition purposes, the packaging requirements shall be as specified in the contract or order (see 6.2). When packaging of materiel is to be performed by DoD or in-house contractor personnel, these personnel need to contact the responsible packaging activity to ascertain packaging requirements. Packaging requirements are maintained by the Inventory Control Point's packaging activities within the Military Service or Defense Agency, or within the Military Service's system commands. Packaging data retrieval is available from the managing Military Department's or Defense Agency's automated packaging files, CD-ROM products, or by contacting the responsible packaging activity.

6. NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory. The notes specified in MIL-PRF-19500 are applicable to this specification.)

6.1 Intended use. Semiconductors conforming to this specification are intended for original equipment design applications and logistic support of existing equipment.

6.2 Acquisition requirements. Acquisition documents should specify the following:

a. Title, number, and date of this specification.

b. Packaging requirements (see 5.1).

c. Lead finish (see 3.4.1).

d. The complete PIN (see 1.5 and 6.5).

e. For acquisition of RHA designed devices, table II, subgroup 1 testing of group D is optional. If subgroup 1 testing is desired, it should be specified in the contract.

6.3 Qualification. With respect to products requiring qualification, awards will be made only for products which are, at the time of award of contract, qualified for inclusion in Qualified Manufacturers List (QPDSIS 19500) whether or not such products have actually been so listed by that date. The attention of the contractors is called to these requirements, and manufacturers are urged to arrange to have the products that they propose to offer to the Federal Government tested for qualification in order that they may be eligible to be awarded contracts or orders for the products covered by this specification. Information pertaining to qualification of products may be obtained from DLA Land and Maritime, ATTN: VQE, P.O. Box 3990, Columbus, OH 43218-3990 or e-mail vqe.chief@dla.mil. An online listing of products qualified to this specification may be found in the Qualified Products Database (QPD) at https://assist.dla.mil.

6.4 Suppliers of JANHC and JANKC die. The qualified JANHC and JANKC suppliers with the applicable letter version (example JANHCA2N2945) will be identified on the QML.

6.5 PIN construction examples.

6.5.1 Encapsulated devices. The PIN for encapsulated devices are constructed using the following form:

\[
\begin{array}{c}
\text{JANTXV} \\
\text{M} \\
\text{2N} \\
\text{2944} \\
\text{A}
\end{array}
\]

- JAN brand and quality level (see 1.5.1)
- RHA designator, if applicable (see 1.5.2)
- First number and first letter symbols (see 1.5.3.1)
- Second number symbols (see 1.5.3.2)
- Suffix letters (see 1.5.4)

6.5.2 Un-encapsulated devices. The PINs for un-encapsulated devices are constructed using the following form:

\[
\begin{array}{c}
\text{JANHC} \\
\text{M} \\
\text{2N} \\
\text{2944} \\
\text{A}
\end{array}
\]

- JAN brand and quality level (see 1.5.1)
- RHA designator, if applicable (see 1.5.2)
- First number and first letter symbols (see 1.5.3.1)
- Second number symbols (see 1.5.3.2)
- Suffix letters (see 1.5.4)

6.6 List of PINs.
