1/ Each relay possesses high level and low level capabilities. However, relays previously tested or used above 10 mA resistive at 6 V dc maximum or peak ac open circuit are not recommended for subsequent use in low level applications.

2/ The suffix letter L, M, P, or R to designate the applicable failure rate level shall be added to the applicable listed dash number. Failure rate level (percent per 10,000 cycles): L, 3.0; M, 1.0; P, 0.1; R, 0.01. EXAMPLE, 001L - - - - - - - 003M.

3/ CAUTION: Use of any coil voltage less than the rated coil voltage will compromise the operation of the relay.

4/ Allow 10 percent increase in maximum operate voltages after life tests.
QUALIFICATION INSPECTION:

1/ For retention of qualification or extension of qualification to lower failure rate levels all life test data accumulated on MIL-PRF-39016/47 may be used in addition to MIL-PRF-39016/48 data. Prior to retention of qualification inspection testing; the relay manufacturer shall preselect the sample size.

2/ The number of units required for qualification testing will be increased as required in Q5, of MIL-PRF-39016, if the relay manufacturer elects to test the number of units permitting one or more failures. Prior to performance of qualification inspection testing; the relay manufacturer shall preselect the sampling plan.

QUALIFICATION INSPECTION:

Qualification inspection (reduced testing): See table III.

If the relays produced for MIL-PRF-39016/48 are similar in construction and design except for the coil and residual shim to the relays produced for MIL-PRF-39016/47 and MIL-PRF-39016/48, then reduced testing for qualification of MIL-PRF-39016/48 relays may be performed concurrent with or subsequent to successful qualification of MIL-PRF-39016/47 relays.
