MEMORANDUM FOR MILITARY/INDUSTRY DISTRIBUTION

SUBJECT: Initial Drafts of MIL-PRF-55342/1J – Am 4; -55342/2J – Am 5; -55342/3J – Am 5; -55342/4J – Am 4; -55342/5J – Am 5; -55342/6J – Am 5; -55342/7E – Am 5; -55342/8E – Am 5; -55342/9E – Am 5; -55342/10D – Am 5; -55342/11A – Am 4; -55342/12A – Am 4; -55342/13 – Am 4; & -55342/14. Resistor, Chip, Fixed, Film, Nonestablished Reliability, Established Reliability, Space Level, General Specification for.

The subject draft of these documents are being made available for review and comments. Particular attention should be paid to the following, as all data is suggestive: Change and additions are highlight in yellow, paragraph and table renumbering are highlight in green, and deletions are in red with strike outs.

MIL-PRF-55342/1 thru /13
- Comment box revised (/1, /4, /11, /12, & /13 only).
- Paragraph 2.2.1 parenthesis, has been revised.
- Table I. has been revised.
- Paragraph 3.6 has been added.
- Review activity – Air Force – 99 has been removed.

MIL-PRF-55342/14
- New chip size 0201 sheet.

If these documents are of interest to you, please provide your comments to the project engineer electronically. It is very important that you attempt to respond electronically to this initial draft. This can be in the form of a return e-mail, with or without an attached text file. Because we believe electronic coordination should be faster than hard copy distribution, we have allotted a 30-day coordination cycle from the date of this letter. Please provide your comments within that time period. After the 30-day cycle is completed, a “no response” will be noted as concurrence and any comments received after will be held until the next action. If an electronic response is not possible we will still accept comments via letter, facsimile or phone call but only after you have contacted the project officer listed below. The initial draft documents can be found at the following DLA Land and Maritime-VA web page:

This process still requires military departments to identify their comments as “Essential” or “Suggested”. Essential comments must be justified with supporting data. Military review activities should forward comments to their custodians or this office, as applicable, in sufficient time to allow for consolidating the department reply.

If there are any questions, please contact Andrew Ernst by the preferred method of electronic mail at Andrew.ernst@dla.mil by telephone at commercial 614-692-0552, DSN 850-0552; or by facsimile at 614-692-6939. Our mailing address as a last resort is DLA Land and Maritime, ATTN: VAT, P.O. Box 3990, Columbus, OH 43218-3990. If you have further questions or concerns you may contact me at Michael.radecki@dla.mil, by telephone at 614-692-0561.

SIGNED

Michael Radecki
Chief,
Electronic Components Branch
PERFORMANCE SPECIFICATION SHEET

RESISTOR, CHIP, FIXED, FILM,
NONESTABLISHED RELIABILITY, ESTABLISHED RELIABILITY, SPACE LEVEL,
STYLE RM2208

This specification is approved for use by all Departments and Agencies of the Department of Defense.

The requirements for acquiring the product described herein shall consist of this specification sheet and MIL-PRF-55342.

1. SCOPE

1.1 Scope. This specification covers the requirements for style RM2208, fixed, film, chip, nonestablished reliability, established reliability, and space level resistors. This style is available in characteristic H, characteristic E, characteristic K, characteristic L, and characteristic M, resistance tolerances .1 percent, .25 percent, .5 percent, 1 percent, 2 percent, 5 percent, and 10 percent, and all termination materials. Designers are CAUTIONED on using these resistors in high power pulses applications (see 6.5).

1.2 Part or Identifying Number (PIN). Chip resistors covered by this specification are identified by a PIN which consists of the basic number of this specification and a coded dash number. The PIN is in the following form:

M55342H05

B1E00M

| Performance specification number | Coded dash number |

The coded dash number is derived in accordance with MIL-PRF-55342.

Comments, suggestions, or questions on this document should be emailed to usarmy.apg.cerdec.mbx.standardization-crx@mail.mil. Since contact information can change, you may want to verify the currency of this address information using the ASSIST Online database at https://assist.dla.mil.
2. APPLICABLE DOCUMENTS

2.1 General. The documents listed in this section are specified in sections 3 and 4 of this specification. This section does not include documents cited in other sections of this specification or recommended for additional information or as examples. While every effort has been made to ensure the completeness of this list, document users are cautioned that they must meet all specified requirements documents cited in sections 3 and 4 of this specification, whether or not they are listed.

2.2 Government documents.

2.2.1 Specifications, standards, and handbooks. The following specifications, standards, and handbooks forms a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

DEPARTMENT OF DEFENSE SPECIFICATION

MIL-PRF-55342  -  Resistor, Chip, Fixed, Film, Nonestablished Reliability, Established Reliability, Space Level, General Specification for.  

* (Copies of these documents are available online at https://quicksearch.dla.mil/).

2.3 Order of precedence. Unless otherwise noted herein or in the contract, in the event of a conflict between the text of this document and the references cited herein (except for related, specification sheets), the text of this document takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 General. The requirements for acquiring the product described herein shall consist of this document and MIL-PRF-55342.

3.2 Interface and physical dimensions. Resistors shall meet the interface and physical dimensions specified on figure 1, as applicable.

3.3 Power rating. The power rating for all characteristics shall be 225 milliwatts.

3.4 Voltage rating. The maximum continuous working voltage shall not exceed 175 volts.

3.5 Resistance and resistance tolerance. Minimum and maximum resistance values and associated resistance tolerances shall be as listed in table I.
MIL-PRF-55342/5J
w/ Amendment 5
DRAFT DATE: 7 June 2019

Configuration A

Configuration B

NOTES:
1. Dimensions are in inches.
2. Metric equivalents are given for general information only.
3. Unless otherwise specified, tolerance is ±0.005 (0.13 mm).
4. The pictorial view of the styles above is given as representative of the envelope of the item. Slight deviations from the outline shown, which are contained within the envelope, and do not alter the functional aspects of the device are acceptable.
5. Configuration A covers termination materials D, T, and W.

3.6 **Termination material.** Termination material for resistance values less 1 ohm shall be in accordance with MIL-PRF-55342, code letter B.

4. **VERIFICATION**

4.1 **Verification.** Verification shall be in accordance with MIL-PRF-55342.

5. **PACKAGING**

5.1 **Packaging.** For acquisition purposes, the packaging requirements shall be as specified in the contract or order (see 6.2). When packaging of materiel is to be performed by DoD or in-house contractor personnel, these personnel need to contact the responsible packaging activity to ascertain packaging requirements. Packaging requirements are maintained by the Inventory Control Point’s packaging activity within the Military Service or Defense Agency, or within the military services system commands. Packaging data retrieval is available from the managing Military Department’s or Defense Agency’s automated packaging files, CD-ROM products, or by contacting the responsible packaging activity.

6. **NOTES**

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

6.1 **Intended use.** Chip resistors are intended to be used in thin or thick film hybrid circuits where micro-circuitry is indicated and in surface mount applications.

6.2 **Acquisition requirements.** Acquisition documents should specify the following:

a. Title, number, date of this specification, the applicable associated specification, and the complete PIN (see 1.2).

b. Unless otherwise specified (see 2.1), the versions of the individual documents referenced will be those in effect on the date of release of the solicitation.
c. Packaging requirements (see 5.1). (i.e. Electrostatic discharge (ESD) sensitive packaging).

d. Allowable substitution (see MIL-PRF-55342).

e. If marking is required (see MIL-PRF-55342).

6.3 Tolerance for wraparound termination. The added tolerance for the wraparound type termination is intended to apply only to termination, metallization, and pretinning material.

6.4 Electrostatic charge effects. Under relatively low humidity conditions, some types of film resistors, particularly those with small dimensions and high sheet resistivity materials, are prone to sudden significant changes in resistance (usually reductions in value) and to changes in temperature coefficient of resistance as a result of discharge of static charges built up on associated objects during handling, packaging, or shipping. Substitution of more suitable implements and materials can help minimize this problem. For example, use of cotton gloves, static eliminator devices, air humidifiers, and operator and workbench grounding systems can reduce static buildup during handling. Means of alleviating static problems during shipment include elimination of loose packaging of resistors and use of metal foil (conductive) and static dissipation packaging materials. Direct shipments to the government are controlled by MIL-DTL-39032 which specifies a preventive packaging procedure.

6.5 Pulse applications. Designers are CAUTIONED on using these resistors in high power pulse applications. Since they have not been qualified nor tested for such applications, damage and premature failure are possible. These resistors only see a five second short time overload as part of the group B inspection of this specification.

6.6 Amendment notations. The margins of this specification are marked with asterisks to indicate modifications generated by this amendment. This was done as a convenience only and the Government assumes no liability whatsoever for any inaccuracies in these notations. Bidders and contractors are cautioned to evaluate the requirements of this document based on the entire content irrespective of the marginal notations.
