

REVISIONS			
LTR	DESCRIPTION	DATE (YR-MO-DA)	APPROVED
A	Add packages T and W. Add vendor CAGE 60395 as source of supply. Increase data retention to 20 years, minimum. Redrawn with changes.	93-06-29	M. A. Frye
B	Changes in accordance with NOR 5962-R139-94.	94-03-29	M. A. Frye
C	Changes in accordance with NOR 5962-R278-94.	94-09-19	M. A. Frye
D	Changes in accordance with NOR 5962-R163-96.	96-06-27	M. A. Frye
E	Updated boilerplate. Added device types 16-18 and packages M and N to drawing along with vendor CAGE 0EU86 as supplier. Removed figures 9, 10 and 11 software data protect algorithms. Removed vendor 61395 as supplier. - glg	93-03-16	M. A. Frye
F	Corrected dimensions for packages "M" and "N". - glg	95-11-14	M. A. Frye
G	Added device 19, packages 6 and 7, and updated boilerplate. ksr	98-02-20	Raymond Monnin
H	5 year review, updated boilerplate paragraphs. ksr	05-05-18	Raymond Monnin
J	Update drawing to meet current MIL-PRF-38535 requirements. - glg	10-11-05	Charles F. Saffle
K	Update drawing to reflect current MIL-PRF-38535 requirements. Corrected typos in table I (Write cycle time, Reset protect time, and Reset high time). - llb	16-01-22	Charles F. Saffle
L	Update QR Code. Correct typographical errors in 1.2.4 and Figure 1. Update 1.2.2, 1.2.4, and 2.2 to reflect current MIL-PRF-38535 requirements. - llb	16-10-20	Charles F. Saffle

PMIC N/A	PREPARED BY Kenneth Rice	DLA LAND AND MARITIME COLUMBUS, OHIO 43218-3990 http://www.landandmaritime.dla.mil MICROCIRCUIT, MEMORY, DIGITAL, CMOS 128K x 8 BIT EEPROM, MONOLITHIC SILICON																		
STANDARD MICROCIRCUIT DRAWING THIS DRAWING IS AVAILABLE FOR USE BY ALL DEPARTMENTS AND AGENCIES OF THE DEPARTMENT OF DEFENSE	CHECKED BY Charles Reusing																			
	APPROVED BY Charlie Besore																			
	DRAWING APPROVAL DATE 91-07-12																			
AMSC N/A	REVISION LEVEL L	SIZE A	CAGE CODE 67268	5962-38267																
			SHEET		1 OF 37															

1. SCOPE

1.1 Scope. This drawing documents two product assurance class levels consisting of high reliability (device class Q and M) and space application (device class V). A choice of case outlines and lead finishes are available and are reflected in the Part or Identifying Number (PIN). When available, a choice of Radiation Hardness Assurance (RHA) levels is reflected in the PIN.

1.2 PIN. The PIN is as shown in the following example:

1.2.1 RHA designator. Device classes Q and V RHA marked devices meet the MIL-PRF-38535 specified RHA levels and are marked with the appropriate RHA designator. Device class M RHA marked devices meet the MIL-PRF-38535, appendix A specified RHA levels and are marked with the appropriate RHA designator. A dash (-) indicates a non-RHA device.

1.2.2 Device types. The device types identify the circuit function as follows:

<u>Device type</u>	<u>Generic number</u>	<u>Circuit function</u>	<u>Access time</u>	<u>Write speed</u>	<u>Write mode</u>	<u>Endurance</u>	<u>Software data protect</u>
01,16	1/	128K x 8 EEPROM	250 ns	10 ms	Byte/Page	10,000 cycle	yes
02		128K x 8 EEPROM	250 ns	5 ms	Byte/Page	10,000 cycle	yes
03,17		128K x 8 EEPROM	200 ns	10 ms	Byte/Page	10,000 cycle	yes
04		128K x 8 EEPROM	200 ns	5 ms	Byte/Page	10,000 cycle	yes
05,18		128K x 8 EEPROM	150 ns	10 ms	Byte/Page	10,000 cycle	yes
06		128K x 8 EEPROM	150 ns	5 ms	Byte/Page	10,000 cycle	yes
07,19		128K x 8 EEPROM	120 ns	10 ms	Byte/Page	10,000 cycle	yes
08		128K x 8 EEPROM	120 ns	3 ms	Byte/Page	10,000 cycle	yes
09		128K x 8 EEPROM	90 ns	10 ms	Byte/Page	10,000 cycle	yes
10		128K x 8 EEPROM	90 ns	3 ms	Byte/Page	10,000 cycle	yes
11		128K x 8 EEPROM	70 ns	10 ms	Byte/Page	10,000 cycle	yes
12		128K x 8 EEPROM	70 ns	3 ms	Byte/Page	10,000 cycle	yes
13		128K x 8 EEPROM	120 ns	3 ms	Byte/Page	10,000 cycle	yes
14		128K x 8 EEPROM	90 ns	3 ms	Byte/Page	10,000 cycle	yes
15		128K x 8 EEPROM	70 ns	3 ms	Byte/Page	10,000 cycle	yes

1.2.3 Device class designator. The device class designator is a single letter identifying the product assurance level as follows:

<u>Device class</u>	<u>Device requirements documentation</u>
M	Vendor self-certification to the requirements for MIL-STD-883 compliant, non-JAN class level B microcircuits in accordance with MIL-PRF-38535, appendix A
Q or V	Certification and qualification to MIL-PRF-38535

1/ Generic numbers are listed on the Standard Microcircuit Drawing Source Approval Bulletin at the end of this document and will also be listed in MIL-HDBK-103 and QML-38535.

STANDARD MICROCIRCUIT DRAWING DLA LAND AND MARITIME COLUMBUS, OHIO 43218-3990	SIZE A		5962-38267
		REVISION LEVEL L	SHEET 2

1.2.4 Case outlines. The case outlines are as designated in MIL-STD-1835 and as follows:

<u>Outline letter</u>	<u>Descriptive designator</u>	<u>Terminals</u>	<u>Package style</u>
X	GDIP1-T32 or CDIP2-T32	32	Dual in-line
Y	CQCC1-N44	44	Square chip carrier
Z	See figure 1	32	Flat package
U	CQCC1-N32	32	Rectangular chip carrier
T	See figure 1	30	Grid array
W	See figure 1	36	Grid array
M	See figure 1	32	Flat package
N	See figure 1	32	Flat package
6	See figure 1(enhanced rad tolerant)	32	Flat package
7	See figure 1(enhanced rad tolerant)	32	Flat package

1.2.5 Lead finish. The lead finish is as specified in MIL-PRF-38535 for device classes Q and V or MIL-PRF-38535, appendix A for device class M.

1.3 Absolute maximum ratings. 2/ 3/

Supply voltage range (V_{CC})	-0.5 V dc to +6.0 V dc <u>4/</u>
Operating case temperature range	-55°C to +125°C
Storage temperature range	-65°C to +150°C
Lead temperature (soldering, 10 seconds)	+300°C
Thermal resistance, junction-to-case (θ_{JC}):	
Cases X, Y and U	See MIL-STD-1835
Cases T and W	21°C/W <u>5/</u>
Case Z	18°C/W <u>5/</u>
Case M	3°C/W <u>5/</u>
Case N	2°C/W <u>5/</u>
Case 6	1.5°C/W <u>5/</u>
Case 7	1.5°C/W <u>5/</u>
Maximum power dissipation (P_D)	1.0 watts
Junction temperature (T_J)	+175°C <u>6/</u>
Endurance	10,000 cycles/byte (minimum)
Data retention	20 years minimum

1.4 Recommended operating conditions.

Supply voltage range (V_{CC})	4.5 V dc minimum to 5.5 V dc maximum
Supply voltage (V_{SS})	0.0 V dc
High level input voltage range (V_{IH})	2.0 V dc to $V_{CC} + 1.0$ V dc <u>7/</u>
Low level input voltage range (V_{IL})	-0.1 V dc to 0.8 V dc
Case operating temperature range (T_C)	-55°C to +125°C

1.5 Digital logic testing for device classes Q and V.

Fault coverage measurement of manufacturing logic tests (MIL-STD-883, test method 5012)	100 percent
---	-------------

2/ Stresses above the absolute maximum rating may cause permanent damage to the device. Extended operation at the maximum levels may degrade performance and affect reliability.

3/ All voltages referenced to V_{SS} (V_{SS} = ground), unless otherwise specified.

4/ Negative undershoots to a minimum of -1.0 V are allowed with a maximum of 20 ns pulse width.

5/ When the thermal resistance for this case is specified in MIL-STD-1835, that value shall supersede the value indicated herein.

6/ Maximum junction temperature shall not be exceeded except for allowable short duration burn-in screening conditions in accordance with method 5004 of MIL-STD-883.

7/ For device types 16-19 only, V_{IH} on RES shall be $V_{CC} - 0.5$ V min. to $V_{CC} + 1.0$ V max.

2. APPLICABLE DOCUMENTS

2.1 Government specification, standards, and handbooks. The following specification, standards, and handbooks form a part of this drawing to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

DEPARTMENT OF DEFENSE SPECIFICATION

MIL-PRF-38535 - Integrated Circuits, Manufacturing, General Specification for.

DEPARTMENT OF DEFENSE STANDARDS

MIL-STD-883 - Test Method Standard Microcircuits.
 MIL-STD-1835 - Interface Standard Electronic Component Case Outlines.

DEPARTMENT OF DEFENSE HANDBOOKS

MIL-HDBK-103 - List of Standard Microcircuit Drawings.
 MIL-HDBK-780 - Standard Microcircuit Drawings.

(Copies of these documents are available online at <http://quicksearch.dla.mil> or from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094.)

2.2 Non-Government publications. The following documents form a part of this document to the extent specified herein. Unless otherwise specified, the issues of the documents are the issues of the documents cited in the solicitation.

ASTM INTERNATIONAL (ASTM)

ASTM Standard F1192 - Standard Guide for the Measurement of Single Event Phenomena from Heavy Ion Irradiation of Semiconductor Devices.

(Applications for copies of ASTM publications should be addressed to: ASTM International, PO Box C700, 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959; <http://www.astm.org>.)

JEDEC – SOLID STATE TECHNOLOGY ASSOCIATION (JEDEC)

JESD 78 - IC Latch-Up Test.

(Copies of these documents are available online at <http://www.jedec.org> or from JEDEC – Solid State Technology Association, 3103 North 10th Street, Suite 240-S, Arlington, VA 22201-2107.)

2.3 Order of precedence. In the event of a conflict between the text of this drawing and the references cited herein, the text of this drawing takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 Item requirements. The individual item requirements for device classes Q and V shall be in accordance with MIL-PRF-38535 as specified herein, or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not affect the form, fit, or function as described herein. The individual item requirements for device class M shall be in accordance with MIL-PRF-38535, appendix A for non-JAN class level B devices and as specified herein.

3.2 Design, construction, and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-PRF-38535 and herein for device classes Q and V or MIL-PRF-38535, appendix A and herein for device class M.

3.2.1 Case outlines. The case outlines shall be in accordance with 1.2.4 herein and figure 1.

3.2.2 Terminal connections. The terminal connections shall be as specified on figure 2.

3.2.3 Truth tables. The truth tables shall be as specified on figure 3.

STANDARD MICROCIRCUIT DRAWING DLA LAND AND MARITIME COLUMBUS, OHIO 43218-3990	SIZE A		5962-38267
		REVISION LEVEL L	SHEET 4

3.2.3.1 Unprogrammed devices. The truth table for unprogrammed devices for contracts involving no altered item drawing shall be as specified on figure 3 herein. When required, in screening (see 4.2 herein), or quality conformance inspection groups A, B, C, or D (see 4.4 herein), the devices shall be programmed by the manufacturer prior to test in a checkerboard or similar pattern (a minimum of 50 percent of the total number of bits programmed).

3.2.3.2 Programmed devices. The requirements for supplying programmed devices are not part of this document.

3.3 Electrical performance characteristics and postirradiation parameter limits. Unless otherwise specified herein, the electrical performance characteristics and postirradiation parameter limits are as specified in table I and shall apply over the full case operating temperature range.

3.4 Electrical test requirements. The electrical test requirements shall be the subgroups specified in table II. The electrical tests for each subgroup are defined in table I.

3.5 Marking. The part shall be marked with the PIN listed in 1.2 herein. In addition, the manufacturer's PIN may also be marked. For packages where marking of the entire SMD PIN number is not feasible due to space limitations, the manufacturer has the option of not marking the "5962-" on the device. For RHA product using this option, the RHA designator shall still be marked. Marking for device classes Q and V shall be in accordance with MIL-PRF-38535. Marking for device class M shall be in accordance with MIL-PRF-38535, appendix A.

3.5.1 Certification/compliance mark. The certification mark for device classes Q and V shall be a "QML" or "Q" as required in MIL-PRF-38535. The compliance mark for device class M shall be a "C" as required in MIL-PRF-38535, appendix A.

3.6 Certificate of compliance. For device classes Q and V, a certificate of compliance shall be required from a QML-38535 listed manufacturer in order to supply to the requirements of this drawing (see 6.6.1 herein). For device class M, a certificate of compliance shall be required from a manufacturer in order to be listed as an approved source of supply in MIL-HDBK-103 (see 6.6.2 herein). The certificate of compliance submitted to DLA Land and Maritime-VA prior to listing as an approved source of supply for this drawing shall affirm that the manufacturer's product meets, for device classes Q and V, the requirements of MIL-PRF-38535 and herein or for device class M, the requirements of MIL-PRF-38535, appendix A and herein.

3.7 Certificate of conformance. A certificate of conformance as required for device classes Q and V in MIL-PRF-38535 or for device class M in MIL-PRF-38535, appendix A shall be provided with each lot of microcircuits delivered to this drawing.

3.8 Notification of change for device class M. For device class M, notification to DLA Land and Maritime-VA of change of product (see 6.2 herein) involving devices acquired to this drawing is required for any change that affects this drawing.

3.9 Verification and review for device class M. For device class M, DLA Land and Maritime, DLA Land and Maritime's agent, and the acquiring activity retain the option to review the manufacturer's facility and applicable required documentation. Offshore documentation shall be made available onshore at the option of the reviewer.

3.10 Microcircuit group assignment for device class M. Device class M devices covered by this drawing shall be in microcircuit group number 042 (see MIL-PRF-38535, appendix A).

3.11 Processing of EEPROMs. All testing requirements and quality assurance provisions herein shall be satisfied by the manufacturer prior to delivery.

3.11.1 Conditions of the supplied devices. Devices will be supplied in an unprogrammed or clear state. No provision will be made for supplying programmed devices.

3.11.2 Erasure of EEPROMs. When specified, devices shall be erased in accordance with procedures and characteristics specified in 4.5.1.

3.11.3 Programming of EEPROMs. When specified, devices shall be programmed in accordance with procedures and characteristics specified in 4.5.2.

3.11.4 Verification of state of EEPROMs. When specified, devices shall be verified as either written to the specified pattern or cleared. As a minimum, verification shall consist of performing a read of the entire array to verify that all bits are in the proper state. Any bit that does not verify to be in the proper state shall constitute a device failure and the device shall be removed from the lot or sample.

STANDARD MICROCIRCUIT DRAWING DLA LAND AND MARITIME COLUMBUS, OHIO 43218-3990	SIZE A		5962-38267
		REVISION LEVEL L	SHEET 5

3.11.5 Power supply sequence of EEPROMs. In order to reduce the probability of inadvertent writes, the following power supply sequences shall be observed.

- a. For device types 1-19, a logic high state shall be applied to \overline{WE} and/or \overline{CE} at the same time or before the application of V_{CC} . For device types 16-19, an additional precaution is available; a logic low state shall be applied to \overline{RES} at the same time or before the application of V_{CC} .
- b. For device types 1-19, a logic high state shall be applied to \overline{WE} and/or \overline{CE} at the same time or before the removal of V_{CC} . For device types 16-19, an additional precaution is available; a logic low state shall be applied to \overline{RES} at the same time or before the removal of V_{CC} .

3.12 Endurance. A reprogrammability test shall be completed as part of the vendor's reliability monitors. This reprogrammability test shall be done for initial characterization and after any design or process changes which may affect the reprogrammability of the device. The methods and procedures may be vendor specific, but shall guarantee the number of program/erase endurance cycles listed in section 1.3 herein over the full military temperature range. The vendor's procedure shall be kept under document control and shall be made available upon request of the acquiring or preparing activity, along with test data.

3.13 Data retention. A data retention stress test shall be completed as part of the vendor's reliability monitors. This test shall be done for initial characterization and after any design or process change which may affect data retention. The methods and procedures may be vendor specific, but shall guarantee the number of years listed in section 1.3 herein over the full military temperature range. The vendor's procedure shall be kept under document control and shall be made available upon request of the acquiring or preparing activity, along with test data.

TABLE I. Electrical performance characteristics – Continued.

Test	Symbol	Conditions -55°C ≤ T _C ≤ +125°C V _{SS} = 0 V; 4.5 V ≤ V _{CC} ≤ 5.5 V unless otherwise specified	Group A subgroups	Device type	Limits		Unit
					Min	Max	
\overline{RES} low to output float	t _{DFR}	See figures 4, 5, and 6 as applicable. <u>5/</u> <u>8/</u>	9, 10, 11	16-19	0	350	ns
\overline{RES} to output delay	t _{RR}		9, 10, 11	16-19	0	450	ns
Reset protect time	t _{RP}		9, 10, 11	16-19	100		μs
Reset high time	t _{RES}		9, 10, 11	16-19	1.0		μs
Time to device busy	t _{DB}		9, 10, 11	16-19	120		ns

- 1/ Connect all address inputs and \overline{OE} to V_{IH} and measure I_{oZL} and I_{oZH} with the output under test connected to V_{OUT}. Terminal connections for the output leakage current test shall be as follows:
- V_{IH} = 2.0 V for device types 01-15 and 2.2 V for device types 16-19; V_{IL} = 0.8 V.
 - For I_{oZL}: Select an appropriate address to acquire a logic "1" on the designated output. Apply V_{IH} to \overline{CE} . Measure the leakage current while applying the specified voltage.
 - For I_{oZH}: Select an appropriate address to acquire a logic "0" on the designated output. Apply V_{IH} to \overline{CE} .
- 2/ A functional test shall verify the dc input and output levels and applicable patterns as appropriate, all input and I/O pins shall be tested. Terminal conditions are as follows:
- Inputs: H = 2.0 V for device types 01-15 and 2.2 V for device types 16-19; L = 0.8 V. Outputs: H = 2.4 V minimum and L = 0.4 V maximum.
 - The functional tests shall be performed with V_{CC} = 4.5 V and V_{CC} = 5.5 V.
- 3/ All pins not being tested are to be open.
- 4/ Tested initially and after any design or process changes which may affect that parameter, and therefore shall be guaranteed to the limits specified in table I.
- 5/ Tested by application of specified timing signals and conditions.
Equivalent ac test conditions:
Output load, see figure 5; input rise and fall times ≤ 10 ns; input pulse levels, 0.4 V and 2.4 V; timing measurement reference levels, inputs, 1.5 V for device types 1-15 and 1 V and 2 V for device types 16-19; output, 1.5 V for device types 1-15 and 0.8 V and 2 V for device types 16-19.
- 6/ Chip erase functions are applicable to device types 01-05 only.
- 7/ This parameter not applicable for internal timer controlled devices.
- 8/ \overline{RES} functions are applicable to device types 16-19 only.

NOTES:

1. All dimensions and tolerances conform to ANSI Y14.5M-1982.
2. Index area: An identification mark shall be located adjacent to pin 1 within the shaded area shown. Alternatively, a tab (dim k) may be used as shown.
3. Dimension Q shall be measured from the point on the lead located opposite the braze pad.
4. This dimension includes lid thickness.
5. Optional, see note 2. If pin 1 identification is used instead of this tab, the minimum dimension does not apply.
6. (N) indicates number of leads.
7. Uses a metal lid.
8. Includes braze fillet.
9. Metric equivalents are given for general information only.

4. VERIFICATION

4.1 Sampling and inspection. For device classes Q and V, sampling and inspection procedures shall be in accordance with MIL-PRF-38535 or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not affect the form, fit, or function as described herein. For device class M, sampling and inspection procedures shall be in accordance with MIL-PRF-38535, appendix A.

4.2 Screening. For device classes Q and V, screening shall be in accordance with MIL-PRF-38535, and shall be conducted on all devices prior to qualification and technology conformance inspection. For device class M, screening shall be in accordance with method 5004 of MIL-STD-883, and shall be conducted on all devices prior to quality conformance inspection.

4.2.1 Additional criteria for device class M.

- a. Delete the sequence specified as initial (preburn-in) electrical parameters through interim (postburn-in) electrical parameters of method 5004 and substitute lines 1 through 6 of table IIA herein.
- b. Prior to burn-in, the devices shall be programmed (see 4.5.2 herein) with a checkerboard pattern or equivalent (manufacturers at their option may employ an equivalent pattern provided it is a topologically true alternating bit pattern). The pattern shall be read before and after burn-in. Devices having bits not in the proper state after burn-in shall constitute a device failure and shall be included in the PDA calculation and shall be removed from the lot.
- c. Burn-in test, method 1015 of MIL-STD-883.
 - (1) Test condition D. The test circuit shall be maintained by the manufacturer under document revision level control and shall be made available to the preparing or acquiring activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1015 of MIL-STD-883.
 - (2) $T_A = +125^{\circ}\text{C}$, minimum.
- d. Interim and final electrical test parameters shall be as specified in table IIA herein.
- e. After the completion of all screening, the device shall be erased and verified prior to delivery.

4.2.2 Additional criteria for device classes Q and V.

- a. The burn-in test duration, test condition and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The burn-in test circuit shall be maintained under document revision level control of the device manufacturer's Technology Review Board (TRB) in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1015 of MIL-STD-883.
- b. Interim and final electrical test parameters shall be as specified in table IIA herein.
- c. Additional screening for device class V beyond the requirements of device class Q shall be as specified in MIL-PRF-38535, appendix B.

4.3 Qualification inspection for device classes Q and V. Qualification inspection for device classes Q and V shall be in accordance with MIL-PRF-38535. Inspections to be performed shall be those specified in MIL-PRF-38535 and herein for groups A, B, C, D, and E inspections (see 4.4.1 through 4.4.4).

4.4 Conformance inspection. Technology conformance inspection for classes Q and V shall be in accordance with MIL-PRF-38535 including groups A, B, C, D, and E inspections, and as specified herein. Quality conformance inspection for device class M shall be in accordance with MIL-PRF-38535, appendix A and as specified herein. Inspections to be performed for device class M shall be those specified in method 5005 of MIL-STD-883 and herein for groups A, B, C, D, and E inspections (see 4.4.1 through 4.4.4).

STANDARD MICROCIRCUIT DRAWING DLA LAND AND MARITIME COLUMBUS, OHIO 43218-3990	SIZE A		5962-38267
		REVISION LEVEL L	SHEET 32

4.4.1 Group A inspection.

- a. Tests shall be as specified in table IIA herein.
- b. Subgroups 5 and 6 of table I of method 5005 of MIL-STD-883 shall be omitted.
- c. Subgroup 4 (C_{IN} and C_{OUT} measurements) shall be measured only for initial qualification and after any process or design changes which may affect input or output capacitance. Capacitance shall be measured between the designated terminal and GND at a frequency of 1 MHz. Sample size is 15 devices with no failures, and all input and output terminals tested.
- d. For device class M, subgroups 7 and 8 tests shall be sufficient to verify the truth table. For device classes Q and V, subgroups 7 and 8 shall include verifying the functionality of the device, these tests shall have been fault graded in accordance with MIL-STD-883, test method 5012 (see 1.5 herein).
- e. O/V (latch-up) tests shall be measured only for initial qualification and after any design or process changes which may affect the performance of the device. For device class M, procedures and circuits shall be maintained under document revision level control by the manufacturer and shall be made available to the preparing activity or acquiring activity upon request. For device classes Q and V, the procedures and circuits shall be under the control of the device manufacturer's TRB in accordance with MIL-PRF-38535 and shall be made available to the preparing activity or acquiring activity upon request. Testing shall be on all pins, on five devices with zero failures. Latch-up test shall be considered destructive. Information contained in JESD 78 may be used for reference.
- f. All devices selected for testing shall be programmed with a checkerboard pattern or equivalent. After completion of all testing, the devices shall be erased and verified, (except devices submitted for groups C and D testing).

4.4.2 Group C inspection. The group C inspection end-point electrical parameters shall be as specified in table IIA herein.

4.4.2.1 Additional criteria for device class M. Steady-state life test conditions, method 1005 of MIL-STD-883:

- a. Test condition D or E. The test circuit shall be maintained by the manufacturer under document revision level control and shall be made available to the preparing or acquiring activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1005 of MIL-STD-883.
- b. T_A = +125°C, minimum.
- c. Test duration: 1,000 hours, except as permitted by method 1005 of MIL-STD-883.
- d. All devices requiring end-point electrical testing shall be programmed with a checkerboard or equivalent alternating bit pattern.
- e. After the completion of all testing, the devices shall be cleared and verified prior to delivery.

4.4.2.2 Additional criteria for device classes Q and V. The steady-state life test duration, test condition and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The test circuit shall be maintained under document revision level control by the device manufacturer's TRB in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1005 of MIL-STD-883.

10	Group E end-point electrical parameters (see 4.4)	1, 7, 9	1, 7, 9	1, 7, 9

1/ Blank spaces indicate tests are not applicable.

2/ Any or all subgroups may be combined when using high-speed testers.

3/ Subgroups 7 and 8 functional tests shall verify the truth table.

4/ * indicates PDA applies to subgroup 1 and 7.

5/ ** see 4.4.1c.

6/ Δ indicates delta limit (see table IIB) shall be required where specified, and the delta values shall be computed with reference to the previous interim electrical parameters (see line 1).

7/ See 4.4.1e.

TABLE IIB. Delta limits at +25°C.

Test <u>1/</u>	All device types
I _{CC3} standby	± 10% of specified value in table I
I _{IH} , I _{IL}	± 10% of specified value in table I
I _{OHZ} , I _{OLZ}	± 10% of specified value in table I

1/ The above parameter shall be recorded before and after the required burn-in and life tests to determine the delta Δ.

STANDARD MICROCIRCUIT DRAWING DLA LAND AND MARITIME COLUMBUS, OHIO 43218-3990	SIZE A		5962-38267
		REVISION LEVEL L	SHEET 34

4.4.3 Group D inspection. The group D inspection end-point electrical parameters shall be as specified in table IIA herein. The devices selected for testing shall be programmed with a checkerboard pattern. After completion of all testing, the devices shall be erased and verified.

4.4.4 Group E inspection. Group E inspection is required only for parts intended to be marked as radiation hardness assured (see 3.5 herein).

- a. End-point electrical parameters shall be as specified in table IIA herein.
- b. For device classes Q and V, the devices or test vehicle shall be subjected to radiation hardness assured tests as specified in MIL-PRF-38535 for the RHA level being tested. For device class M, the devices shall be subjected to radiation hardness assured tests as specified in MIL-PRF-38535, appendix A for the RHA level being tested. All device classes must meet the postirradiation end-point electrical parameter limits as defined in table I at $T_A = +25^{\circ}\text{C} \pm 5^{\circ}\text{C}$, after exposure, to the subgroups specified in table IIA herein.

4.5 Methods of inspection. Methods of inspection shall be as specified in the appropriate figures and tables herein.

4.5.1 Erasing procedures. The erasing procedures shall be as specified by the device manufacturer and shall be available upon request.

4.5.2 Programming procedure. The programming procedures shall be as specified by the device manufacturer and shall be made available upon request.

4.5.3 Software data protect procedures. The software data protect procedures shall be as specified by the device manufacturer and shall be made available upon request.

4.6 Delta measurements for device class V. Delta measurements, as specified in table IIA, shall be made and recorded before and after the required burn-in screens and steady-state life tests to determine delta compliance. The electrical parameters to be measured, with associated delta limits are listed in table IIB. The device manufacturer may, at his option, either perform delta measurements or within 24 hours after burn-in perform final electrical parameter tests, subgroups 1, 7, 9.

5. PACKAGING

5.1 Packaging requirements. The requirements for packaging shall be in accordance with MIL-PRF-38535 for device classes Q and V or MIL-PRF-38535, appendix A for device class M.

6. NOTES

6.1 Intended use. Microcircuits conforming to this drawing are intended for use for Government microcircuit applications (original equipment), design applications, and logistics purposes.

6.1.1 Replaceability. Microcircuits covered by this drawing will replace the same generic device covered by a contractor prepared specification or drawing.

6.1.2 Substitutability. Device class Q devices will replace device class M devices.

6.2 Configuration control of SMD's. All proposed changes to existing SMD's will be coordinated with the users of record for the individual documents. This coordination will be accomplished using DD Form 1692, Engineering Change Proposal.

6.3 Record of users. Military and industrial users should inform DLA Land and Maritime when a system application requires configuration control and which SMD's are applicable to that system. DLA Land and Maritime will maintain a record of users and this list will be used for coordination and distribution of changes to the drawings. Users of drawings covering microelectronic devices (FSC 5962) should contact DLA Land and Maritime-VA, telephone (614) 692-8108.

6.4 Comments. Comments on this drawing should be directed to DLA Land and Maritime-VA, Columbus, Ohio 43218-3990, or telephone (614) 692-0540.

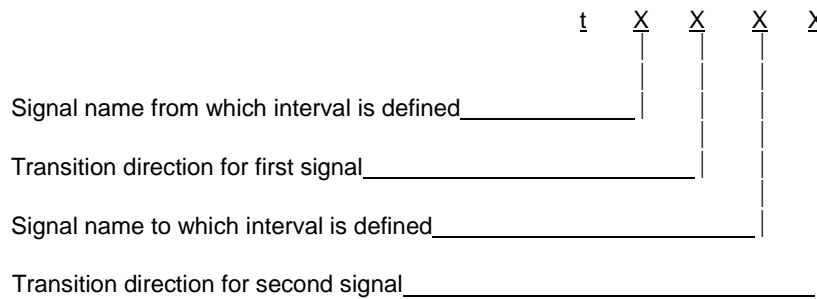

STANDARD MICROCIRCUIT DRAWING DLA LAND AND MARITIME COLUMBUS, OHIO 43218-3990	SIZE A		5962-38267
		REVISION LEVEL L	SHEET 35

6.5 Abbreviations, symbols, and definitions. The abbreviations, symbols, and definitions used herein are defined in MIL-PRF-38535 and MIL-HDBK-1331, and as follows:

- C_{IN}, C_{OUT} Input and bidirectional output, terminal-to-GND capacitance.
- GND Ground zero voltage potential.
- I_{CC} Supply current.
- I_{IL} Input current low.
- I_{IH} Input current high.
- T_C Case temperature.
- T_A Ambient temperature.
- V_{CC} Positive supply voltage.
- V_H Output enable and Write enable voltage during chip erase.
- O/V Latchup over-voltage.

6.5.1 Timing limits. The table of timing values shows either a minimum or a maximum limit for each parameter. Input requirements are specified from the external system point of view. Thus, address setup time is shown as a minimum since the system must supply at least that much time (even though most devices do not require it). On the other hand, responses from the memory are specified from the device point of view. Thus, the access time is shown as a maximum since the device never provides data later than that time.

6.5.2 Timing parameter abbreviations. All timing abbreviations use lower case characters with upper case subscripts. The initial character is always "t" and is followed by four descriptors. These characters specify two signal points arranged in a "from-to" sequence that define a timing interval. The two descriptors for each signal specify the signal name and the signal transition. Thus the format is:

a. Signal definitions:

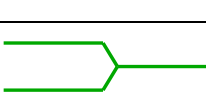

- A = Address
- D = Data in
- Q = Data out
- W = Write enable
- E = Chip enable
- G = Output enable

b. Transition definitions:

- H = Transition to high
- L = Transition to low
- V = Transition to valid
- X = Transition to invalid or don't care
- Z = Transition to off (high impedance)

STANDARD MICROCIRCUIT DRAWING DLA LAND AND MARITIME COLUMBUS, OHIO 43218-3990	SIZE A	5962-38267
	REVISION LEVEL L	SHEET 36

6.5.3 Waveforms.

Waveform symbol	Input	Output
	MUST BE VALID	WILL BE VALID
	CHANGE FROM H TO L	WILL CHANGE FROM H TO L
	CHANGE FROM L TO H	WILL CHANGE FROM L TO H
	DON'T CARE ANY CHANGE PERMITTED	CHANGING STATE UNKNOWN
		HIGH IMPEDANCE

6.6 Sources of supply.

6.6.1 Sources of supply for device classes Q and V. Sources of supply for device classes Q and V are listed in MIL-HDBK-103 and QML-38535. The vendors listed in QML-38535 have submitted a certificate of compliance (see 3.6 herein) to DLA Land and Maritime-VA and have agreed to this drawing.

6.6.2 Approved sources of supply for device class M. Approved sources of supply for class M are listed in MIL-HDBK-103. The vendors listed in MIL-HDBK-103 have agreed to this drawing and a certificate of compliance (see 3.6 herein) has been submitted to and accepted by DLA Land and Maritime-VA.

		REVISION LEVEL L	SHEET 37

STANDARD MICROCIRCUIT DRAWING BULLETIN

DATE: 16-10-20

Approved sources of supply for SMD 5962-38267 are listed below for immediate acquisition information only and shall be added to MIL-HDBK-103 and QML-38535 during the next revision. MIL-HDBK-103 and QML-38535 will be revised to include the addition or deletion of sources. The vendors listed below have agreed to this drawing and a certificate of compliance has been submitted to and accepted by DLA Land and Maritime-VA. This information bulletin is superseded by the next dated revision of MIL-HDBK-103 and QML-38535. DLA Land and Maritime maintains an online database of all current sources of supply at <https://landandmaritimeapps.dla.mil/programs/smcr/>.
