REVISIONS			
LTR	DESCRIPTION	DATE (YR-MO-DA)	APPROVED
A	Change to the delta limit in table IIB for the input leakage current. Update boilerplate. - rrp	01-05-11	R. MONNIN
B	Changes to the limits for the digital input voltage and analog input voltage ratings in section 1.3. Delete dose rate upset test in section 1.5. Remove dose rate upset testing paragraph in section 4. - rrp	02-08-29	R. MONNIN
C	Delete the $I_{D(OFF)}$ over-voltage test as specified under TABLE I. - ro	05-03-03	R. MONNIN
D	Make change to the die size as specified under APPENDIX A. - ro	06-02-13	R. MONNIN
E	Make change to the continuous current description as specified under 1.3. - ro	07-01-29	J. RODENBECK
F	Add device type 02. Make changes to paragraphs 1.5, 3.2.5, and 4.4.4.2. Delete figure 4 radiation exposure circuit. Delete SEP effective let no upset, Dose rate latchup testing, Dose rate burnout, Single event phenomena, and additional information paragraphs. Delete device class M requirements. - ro	13-05-28	C. SAFFLE
G	Add new footnote 4/ to the Source OFF leakage current $I_{S(OFF)}$ test as specified in table I. Delete note 2 from figure 1 terminal connections. - ro	13-11-25	C. SAFFLE
H	Make correction to the die size as specified under Figure A-1. - ro	16-12-05	C. SAFFLE
J	Add missing pins IN1 and IN2 to the die plot as specified under figure A-1. - ro	17-01-23	C. SAFFLE

MICROCIRCUIT, LINEAR, RADIATION HARDENED, CMOS HIGH SPEED QUAD SPST ANALOG SWITCH, MONOLITHIC SILICON

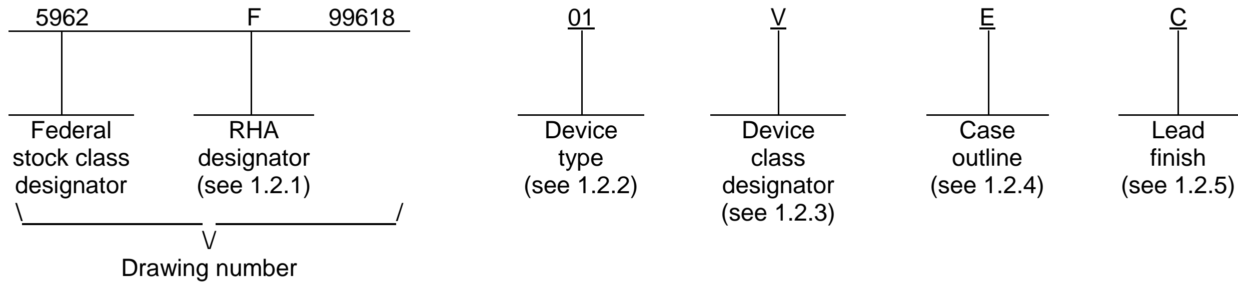
SIZE	CAGE CODE	
A	**67268**	**5962-99618**

SHEET 1 OF 18

1. SCOPE

1.1 Scope. This drawing documents three product assurance class levels consisting of high reliability (device class Q), space application (device class V) and for appropriate satellite and similar applications (device class T). A choice of case outlines and lead finishes are available and are reflected in the Part or Identifying Number (PIN). When available, a choice of Radiation Hardness Assurance (RHA) levels is reflected in the PIN. For device class T, the user is encouraged to review the manufacturer's Quality Management (QM) plan as part of their evaluation of these parts and their acceptability in the intended application.

1.2 PIN. The PIN is as shown in the following example:



1.2.1 RHA designator. Device classes Q, T and V RHA marked devices meet the MIL-PRF-38535 specified RHA levels and are marked with the appropriate RHA designator. A dash (-) indicates a non-RHA device.

1.2.2 Device type(s). The device type(s) identify the circuit function as follows:

Device type	Generic number	Circuit function
01	HS-201HSRH	Radiation hardened, DI, high speed quad SPST CMOS analog switch
02	HS-201HSEH	Radiation hardened, DI, high speed quad SPST CMOS analog switch

1.2.3 Device class designator. The device class designator is a single letter identifying the product assurance level as follows:

Device class	Device requirements documentation
Q, V	Certification and qualification to MIL-PRF-38535
T	Certification and qualification to MIL-PRF-38535 with performance as specified in the device manufacturers approved quality management plan.

1.2.4 Case outline(s). The case outline(s) are as designated in MIL-STD-1835 and as follows:

Outline letter	Descriptive designator	Terminals	Package style
E	CDIP2-T16	16	Dual-in-line
X	CDFP4-F16	16	Flat pack

1.2.5 Lead finish. The lead finish is as specified in MIL-PRF-38535 for device classes Q, T and V.

1.3 Absolute maximum ratings. 1/ 2/

Positive supply voltage (V+ to ground)	+18 V
Negative supply voltage (V- to ground)	-18 V
Digital input voltage (V_{IN})	±17 V
Analog input voltage, one switch (V_S)	±17 V
Maximum power dissipation (P_D)	750 mW
Maximum junction temperature (T_J)	+175°C
Lead temperature (soldering, 10 seconds)	+275°C
Thermal resistance, junction-to-case (θ_{JC})	
Case outlines E and X	12°C/W
Thermal resistance, junction-to-ambient (θ_{JA}):	
Case outline E	80°C/W
Case outline X	95°C/W
Storage temperature range	-65°C to +150°C
Peak current, S or D (pulsed at 1 ms, 10 percent duty cycle max)	50 mA
Continuous current, any terminal	25 mA

1.4 Recommended operating conditions.

Positive supply voltage (V+)	+15 V dc
Negative supply voltage (V-)	-15 V dc
Minimum high level input voltage (V_{IH})	2.4 V dc
Maximum low level input voltage (V_{IL})	0.8 V dc
Ambient operating temperature range (T_A)	-55°C to +125°C
Ground (GND)	0 V dc

1.5 Radiation features:

Maximum total dose available (dose rate = 50 – 300 rads(Si)/s):	
Device type 01:	
Device classes Q or V	300 krads(Si) 3/
Device class T	100 krads(Si) 3/
Device type 02	300 krads(Si) 4/
Maximum total dose available (dose rate ≤ 0.01 rad(Si)/s):	
Device type 02	50 krads(Si) 4/
Single event latch-up (SEL)	No latch up 5/

1/ Stresses above the absolute maximum rating may cause permanent damage to the device. Extended operation at the maximum levels may degrade performance and affect reliability.
2/ Unless otherwise specified, all voltages are referenced to ground.
3/ Device type 01 may be dose rate sensitive in a space environment and may demonstrate enhanced low dose rate effects. The radiation end point limits for the noted parameters are guaranteed only for the conditions as specified in MIL-STD-883, method 1019, condition A to a maximum total dose of 300 krads(Si) for class V or Q and 100 krads(Si) for class T.
4/ Device type 02 radiation end point limits for the noted parameters are guaranteed only for the conditions as specified in MIL-STD-883, method 1019, condition A to a maximum total dose of 300 krads(Si), and condition D to a maximum total dose of 50 krads(Si).
5/ Devices use dielectrically isolated (DI) technology and latch up is physically not possible.

2. APPLICABLE DOCUMENTS

2.1 Government specification, standards, and handbooks. The following specification, standards, and handbooks form a part of this drawing to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

DEPARTMENT OF DEFENSE SPECIFICATION

MIL-PRF-38535 - Integrated Circuits, Manufacturing, General Specification for.

DEPARTMENT OF DEFENSE STANDARDS

MIL-STD-883 - Test Method Standard Microcircuits.
MIL-STD-1835 - Interface Standard Electronic Component Case Outlines.

DEPARTMENT OF DEFENSE HANDBOOKS

MIL-HDBK-103 - List of Standard Microcircuit Drawings.
MIL-HDBK-780 - Standard Microcircuit Drawings.

(Copies of these documents are available online at http://quicksearch.dla.mil or from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094.)

2.2 Order of precedence. In the event of a conflict between the text of this drawing and the references cited herein, the text of this drawing takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 Item requirements. The individual item requirements for device classes Q, T and V shall be in accordance with MIL-PRF-38535 as specified herein, or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not affect the form, fit, or function as described herein.

3.1.1 Microcircuit die. For the requirements of microcircuit die, see appendix A to this document.

3.2 Design, construction, and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-PRF-38535 and herein for device classes Q, T and V.

3.2.1 Case outlines. The case outlines shall be in accordance with 1.2.4 herein.

3.2.2 Terminal connections. The terminal connections shall be as specified on figure 1.

3.2.3 Functional diagram. The functional diagram shall be as specified on figure 2.

3.2.4 Switching waveforms. The switching waveforms shall be as specified on figure 3.

3.2.5 Radiation exposure circuit. The radiation exposure circuit shall be maintained by the manufacturer under document revision level control and shall be made available to the preparing and acquiring activity upon request.

3.3 Electrical performance characteristics and postirradiation parameter limits. Unless otherwise specified herein, the electrical performance characteristics and postirradiation parameter limits are as specified in table I and shall apply over the full ambient operating temperature range.

3.4 Electrical test requirements. The electrical test requirements shall be the subgroups specified in table IIA. The electrical tests for each subgroup are defined in table I.

TABLE I. Electrical performance characteristics.

Test	Symbol	Conditions 1/ $-55°C \leq T_A \leq +125°C$ V+ = +15 V dc, V- = -15 V dc unless otherwise specified		Group A subgroups	Device type	Limits 2/		Unit
						Min	Max	
Analog signal range	V_S	$T_A = +25°C$ 3/		4	01, 02		±15	V
ON resistance	$R_{DS(ON)}$	$V_S = \pm 10$ V, $I_D = 1$ mA, $V_{IN} = 0.8$ V		1	01, 02		50	Ω
				2,3			75	
			M,D,P,L,R,F	1			50	
Source OFF leakage current	$I_{S(OFF)}$	$V_S = \pm 14$ V, 4/ $V_D = \pm 14$ V, $V_{IN} = 2.4$ V		1	01, 02		±10	nA
				2, 3			±100	
			M,D,P,L,R,F	1			±10	
Drain OFF leakage current	$I_{D(OFF)}$	$V_S = \pm 14$ V, $V_D = \pm 14$ V, $V_{IN} = 2.4$ V		1	01, 02		±10	nA
				2, 3			±100	
			M,D,P,L,R,F	1			±10	
Channel ON leakage current	$I_{D(ON)}$	$V_D = V_S = \pm 14$ V, $V_{IN} = 0.8$ V		1	01, 02		±10	nA
				2, 3			±100	
			M,D,P,L,R,F	1			±10	
Input leakage current (low)	I_{IL}	V_{IN} under test = 0.8 V, all other $V_{IN} = 4.0$ V		1,2,3	01, 02		±500	µA
			M,D,P,L,R,F	1			±500	
Input leakage current (high)	I_{IH}	V_{IN} under test = 4.0 V, all other $V_{IN} = 0.8$ V		1,2,3	01, 02		±40	µA
			M,D,P,L,R,F	1			±40	
Positive supply current	I+	$V_{IN} = 2.4$ V or $V_{IN} = 0.8$ V for all switches		1,2,3	01, 02		12	mA
			M,D,P,L,R,F	1			12	
Negative supply current	I-	$V_{IN} = 2.4$ V or $V_{IN} = 0.8$ V for all switches		1,2,3	01, 02		12	mA
			M,D,P,L,R,F	1			12	
Input threshold (low)	V_{AL}	$V_S = -10$ V input, $V_D = 1$ mA load		1,2,3	01, 02		0.8	V
			M,D,P,L,R,F	1			0.8	
Input threshold (high)	V_{AH}	$V_S = -10$ V input, $V_D = 1$ mA load		1,2,3	01, 02	2.4		V
			M,D,P,L,R,F	1		2.4		

See footnotes at end of table.

TABLE I. Electrical performance characteristics - Continued.

Test	Symbol	Conditions 1/ $-55°C \leq T_A \leq +125°C$ V+ = +15 V dc, V- = -15 V dc unless otherwise specified		Group A subgroups	Device type	Limits 2/		Unit
						Min	Max	
Switch on time	t_{ON}	R_L = 1 kΩ, C_L = 35 pF, V_S = ±10 V, V_{IH} = +3 V,		9	01, 02		110	ns
		V_{IL} = 0 V, see figure 3		10,11			130	
			M,D,P,L,R,F	9			130	
Switch off time	t_{OFF}	R_L = 1 kΩ, C_L = 35 pF, V_S = ±10 V, V_{IH} = +3 V,		9	01, 02		80	ns
		V_{IL} = 0 V, see figure 3		10,11			110	
			M,D,P,L,R,F	9			80	
Power Off (V+ tied to V-) Leakage current into the source terminal of an off switch with overvoltage applied.	I_S(OFF) over-voltage	V_S = ±17 V, V_D = 0 V,		1	01, 02	-1.0	1.0	µA
		unused inputs tied to ground		2,3		-5.0	5.0	
			M,D,P,L,R,F	1		-5.0	5.0	

1/ RHA device type 01 supplied to this drawing will meet all levels M, D, P, L, R and F of irradiation for device classes Q and V, and will meet all levels M, D, P, L and R of irradiation for device class T. However, device classes Q and V are only tested at the “F” level, and device class T is only tested at the “R” level in accordance with MIL-STD-883 method 1019 condition A (see 1.5 herein).

RHA device type 02 supplied to this drawing will meet all levels M, D, P, L, R, and F of irradiation for condition A and levels M, D, P, and L for condition D. However, device type 02 is only tested at the “F” level in accordance with MIL-STD-883, method 1019, condition A and tested at the “L” level in accordance with MIL-STD-883, method 1019, condition D (see 1.5 herein).

Pre and post irradiation values are identical unless otherwise specified in table I. When performing post irradiation electrical measurements for any RHA level, T_A = +25°C.

2/ The limiting terms “min” (minimum) and “max” (maximum) shall be considered to apply to magnitudes only. Negative current shall be defined as conventional current flow out of a device terminal.

3/ These parameters may not be tested, but shall be guaranteed to the limits specified in table I herein.

4/ There is no drain to source isolation.

Device types	01 and 02

14	S_2
15	D_2
16	IN_2

NOTE:
1. NC = No connection.

FIGURE 1. Terminal connections.

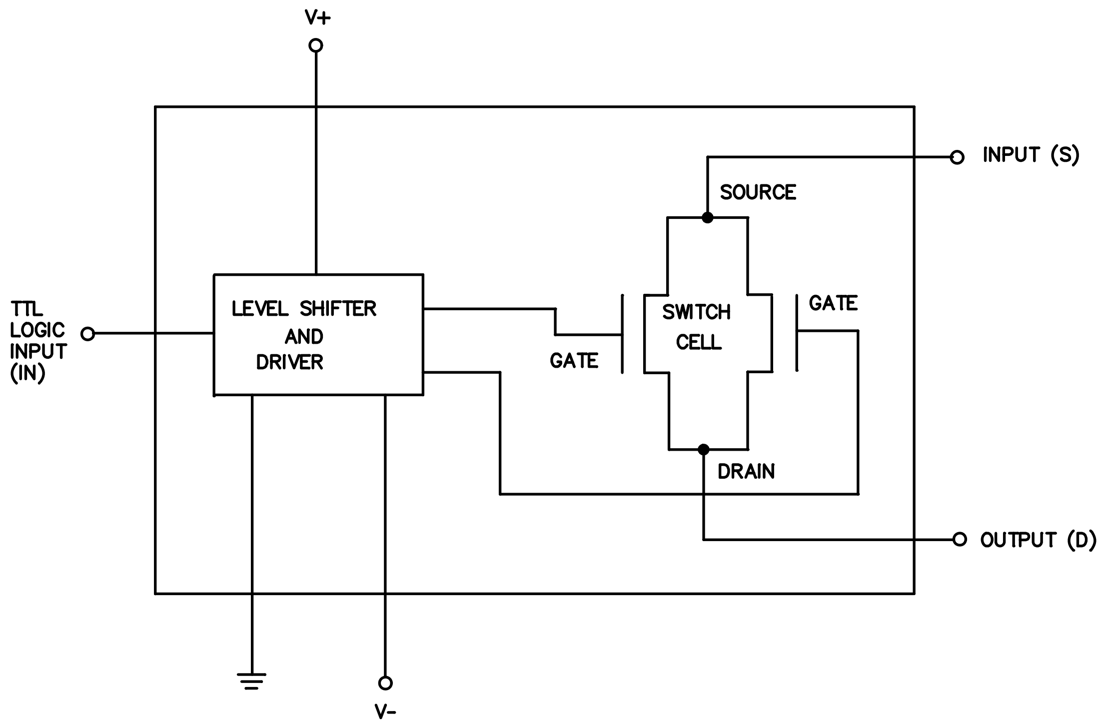

FIGURE 2. Functional diagram.

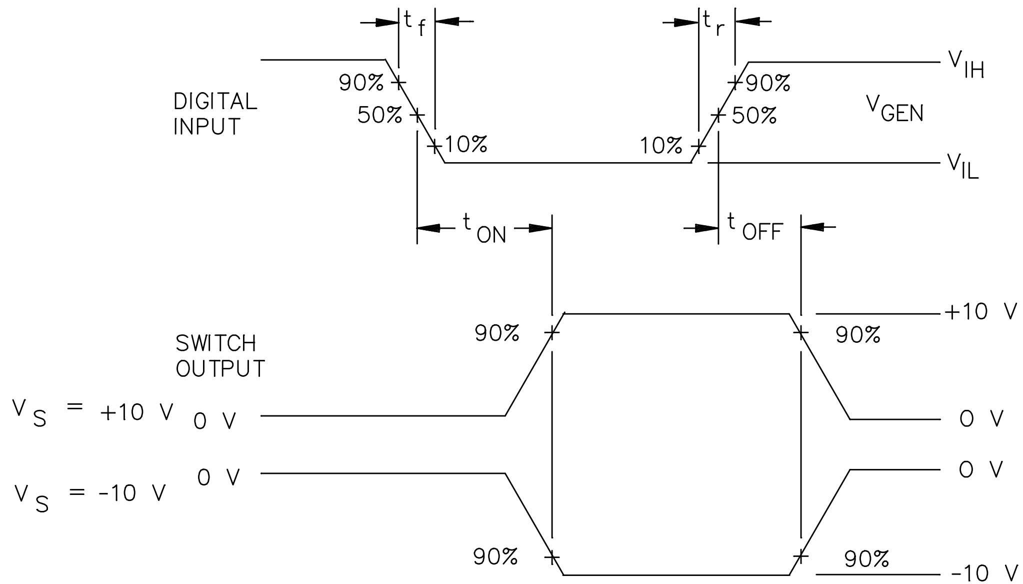

FIGURE 3. Switching waveforms.

3.5 Marking. The part shall be marked with the PIN listed in 1.2 herein. In addition, the manufacturer's PIN may also be marked. For packages where marking of the entire SMD PIN number is not feasible due to space limitations, the manufacturer has the option of not marking the "5962-" on the device. For RHA product using this option, the RHA designator shall still be marked. Marking for device classes Q, T and V shall be in accordance with MIL-PRF-38535.

3.5.1 Certification/compliance mark. The certification mark for device classes Q, T and V shall be a "QML" or "Q" as required in MIL-PRF-38535.

3.6 Certificate of compliance. For device classes Q, T and V, a certificate of compliance shall be required from a QML-38535 listed manufacturer in order to supply to the requirements of this drawing (see 6.6.1 herein). The certificate of compliance submitted to DLA Land and Maritime-VA prior to listing as an approved source of supply for this drawing shall affirm that the manufacturer's product meets, for device classes Q, T and V, the requirements of MIL-PRF-38535 and herein.

3.7 Certificate of conformance. A certificate of conformance as required for device classes Q, T and V in MIL-PRF-38535 shall be provided with each lot of microcircuits delivered to this drawing.

4. VERIFICATION

4.1 Sampling and inspection. For device classes Q, and V, sampling and inspection procedures shall be in accordance with MIL-PRF-38535 or as modified in the device manufacturer's Quality Management (QM) plan, including screening (4.2), qualification (4.3), and conformance inspection (4.4). The modification in the QM plan shall not affect the form, fit, or function as described herein. For device class T, sampling and inspection procedures shall be in accordance with MIL-PRF-38535 and the device manufacturer’s QM plan including screening, qualification, and conformance inspection. The performance envelope and reliability information shall be as specified in the manufacturer’s QM plan.

4.2 Screening. For device classes Q and V, screening shall be in accordance with MIL-PRF-38535, and shall be conducted on all devices prior to qualification and technology conformance inspection. For device class T, screening shall be in accordance with the device manufacturer’s Quality Management (QM) plan, and shall be conducted on all devices prior to qualification and technology conformance inspection.

4.2.1 Additional criteria for device classes Q, T and V.

a. The burn-in test duration, test condition and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The burn-in test circuit shall be maintained under document revision level control of the device manufacturer's Technology Review Board (TRB) in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1015 of MIL-STD-883.

b. For device classes Q, T and V interim and final electrical test parameters shall be as specified in table IIA herein.

c. Additional screening for device class V beyond the requirements of device class Q shall be as specified in MIL-PRF-38535, Appendix B.

4.3 Qualification inspection for device classes Q, T and V. Qualification inspection for device classes Q and V shall be in accordance with MIL-PRF-38535. Qualification inspection for device class T shall be in accordance with the device manufacturer’s Quality Management (QM) plan. Inspections to be performed shall be those specified in MIL-PRF-38535 and herein for groups A, B, C, D, and E inspections (see 4.4.1 through 4.4.4).

TABLE IIA. Electrical test requirements.

Test requirements	Subgroups (in accordance with MIL-PRF-38535, table III)		
	Device class Q	Device class V	Device class T
Interim electrical parameters (see 4.2)	1	1	As specified in QM plan
Final electrical parameters (see 4.2)	1,2,3,9, 10,11 1/	1,2,3,9, 10,11 2/ 3/	As specified in QM plan
Group A test requirements (see 4.4)	1, 2, 3, 4, 9, 10, 11	1, 2, 3, 4, 9, 10, 11	As specified in QM plan
Group C end-point electrical parameters (see 4.4)	1,2,3	1,2,3 3/	As specified in QM plan
Group D end-point electrical parameters (see 4.4)	1	1	As specified in QM plan
Group E end-point electrical parameters (see 4.4)	1,9	1,9	As specified in QM plan

1/ PDA applies to subgroup 1.
2/ PDA applies to subgroups 1, 9, and Δ's.
3/ Delta limits as specified in table IIB herein shall be required where specified, and the delta values shall be completed with reference to the zero hour electrical parameters (see table I).

TABLE IIB. Burn-in and operating life test, Delta parameters (+25°C).

Parameters	Symbol	Delta limits
ON Resistance	$R_{DS(ON)}$	±10 Ω
Source OFF leakage current	$I_{S(OFF)}$	±2 nA
Drain OFF leakage current	$I_{D(OFF)}$	±2 nA
Channel ON leakage current	$I_{D(ON)}$	±2 nA
Input leakage current (Low)	I_{IL}	±500 nA
Input leakage current (High)	I_{IH}	±500 nA
Positive supply current	I+	±2.4 mA
Negative supply current	I-	±2.4 mA

4.4 Conformance inspection. Technology conformance inspection for classes Q and V shall be in accordance with MIL-PRF-38535 including groups A, B, C, D, and E inspections, and as specified herein. Technology conformance inspection for class T shall be in accordance with the device manufacturer's Quality Management (QM) plan.

4.4.1 Group A inspection.

a. Tests shall be as specified in table IIA herein.

b. Subgroups 5, 6, 7, and 8 in table I, method 5005 of MIL-STD-883 shall be omitted.

4.4.2 Group C inspection. The group C inspection end-point electrical parameters shall be as specified in table IIA herein.

4.4.2.1 Additional criteria for device classes Q, T and V. The steady-state life test duration, test condition and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The test circuit shall be maintained under document revision level control by the device manufacturer's TRB in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1005 of MIL-STD-883.

4.4.3 Group D inspection. The group D inspection end-point electrical parameters shall be as specified in table IIA herein.

4.4.4 Group E inspection. Group E inspection is required only for parts intended to be marked as radiation hardness assured (see 3.5 herein). RHA levels for device classes Q and V shall be as specified in MIL-PRF-38535. End-point electrical parameters shall be as specified in table IIA herein.

4.4.4.1 Group E inspection for device class T. For device class T, the RHA requirements shall be in accordance with the class T radiation requirements of MIL-PRF-38535. End-point electrical parameters shall be as specified in table IIA herein.

4.4.4.2 Total dose irradiation testing. Total dose irradiation testing shall be performed in accordance with MIL-STD-883 method 1019, condition A and as specified herein for device types 01 and 02. In addition, for device type 02 a low dose rate test shall be performed in accordance with MIL-STD-883 method 1019, condition D and as specified herein.

4.4.4.2.1 Accelerated annealing testing. Accelerated annealing testing shall be performed on all devices requiring a RHA level greater than 5 krads(Si). The post-anneal end-point electrical parameter limits shall be as specified in table I herein and shall be the pre-irradiation end-point electrical parameter limits at 25°C ±5°C. Testing shall be performed at initial qualification and after any design or process changes which may affect the RHA response of the device.

4.5 Methods of inspection. Methods of inspection shall be specified as follows:

4.5.1 Voltage and current. Unless otherwise specified, all voltages given are referenced to the microcircuit GND terminal. Currents given are conventional current and positive when flowing into the referenced terminal.

5. PACKAGING

5.1 Packaging requirements. The requirements for packaging shall be in accordance with MIL-PRF-38535 for device classes Q, T and V.

6. NOTES

6.1 Intended use. Microcircuits conforming to this drawing are intended for use for Government microcircuit applications (original equipment), design applications, and logistics purposes.

6.1.1 Replaceability. Microcircuits covered by this drawing will replace the same generic device covered by a contractor prepared specification or drawing.

6.2 Configuration control of SMD's. All proposed changes to existing SMD's will be coordinated with the users of record for the individual documents. This coordination will be accomplished using DD Form 1692, Engineering Change Proposal.

6.3 Record of users. Military and industrial users should inform DLA Land and Maritime when a system application requires configuration control and which SMD's are applicable to that system. DLA Land and Maritime will maintain a record of users and this list will be used for coordination and distribution of changes to the drawings. Users of drawings covering microelectronic devices (FSC 5962) should contact DLA Land and Maritime-VA, telephone (614) 692-8108.

6.4 Comments. Comments on this drawing should be directed to DLA Land and Maritime-VA, Columbus, Ohio 43218-3990, or telephone (614) 692-0540.

6.5 Abbreviations, symbols, and definitions. The abbreviations, symbols, and definitions used herein are defined in MIL-PRF-38535 and MIL-HDBK-1331.

6.6 Sources of supply.

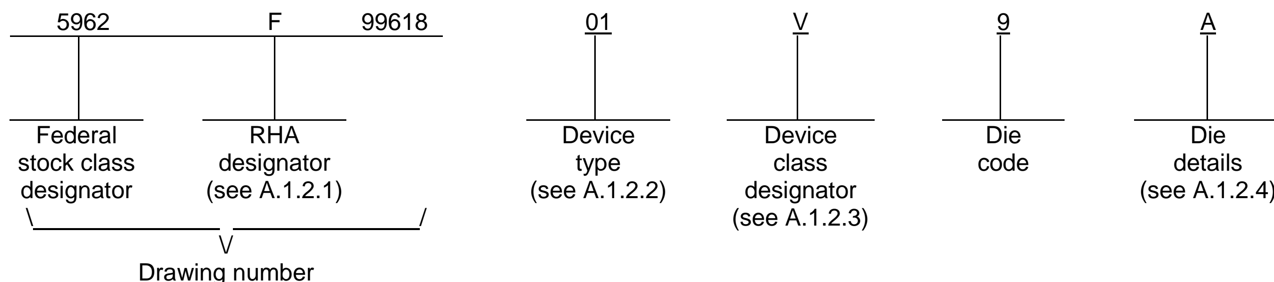
6.6.1 Sources of supply for device classes Q, T and V. Sources of supply for device classes Q, T and V are listed in MIL-HDBK-103 and QML-38535. The vendors listed in QML-38535 have submitted a certificate of compliance (see 3.6 herein) to DLA Land and Maritime-VA and have agreed to this drawing.

APPENDIX A
APPENDIX A FORMS A PART OF SMD 5962-99618

A.1 SCOPE

A.1.1 Scope. This appendix establishes minimum requirements for microcircuit die to be supplied under the Qualified Manufacturers List (QML) Program. QML microcircuit die meeting the requirements of MIL-PRF-38535 and the manufacturers approved QM plan for use in monolithic microcircuits, multi-chip modules (MCMs), hybrids, electronic modules, or devices using chip and wire designs in accordance with MIL-PRF-38534 are specified herein. Two product assurance classes consisting of military high reliability (device class Q) and space application (device class V) are reflected in the Part or Identification Number (PIN). When available, a choice of Radiation Hardness Assurance (RHA) levels are reflected in the PIN.

A.1.2 PIN. The PIN is as shown in the following example:



A.1.2.1 RHA designator. Device classes Q and V RHA identified die meet the MIL-PRF-38535 specified RHA levels. A dash (-) indicates a non-RHA die.

A.1.2.2 Device type(s). The device type(s) identify the circuit function as follows:

Device type	Generic number	Circuit function
01	HS-201HSRH	Radiation hardened, DI high speed quad SPST CMOS analog switch
02	HS-201HSEH	Radiation hardened, DI high speed quad SPST CMOS analog switch

A.1.2.3 Device class designator.

Device class	Device requirements documentation
Q or V	Certification and qualification to the die requirements of MIL-PRF-38535

A.1.2.4 Die details. The die details designation is a unique letter which designates the die's physical dimensions, bonding pad location(s) and related electrical function(s), interface materials, and other assembly related information, for each product and variant supplied to this appendix.

A.1.2.4.1 Die physical dimensions.

Die type	Figure number
01, 02	A-1

A.1.2.4.2 Die bonding pad locations and electrical functions.

Die type	Figure number
01, 02	A-1

A.1.2.4.3 Interface materials.

Die type	Figure number
01, 02	A-1

A.1.2.4.4 Assembly related information.

Die type	Figure number
01, 02	A-1

A.1.3 Absolute maximum ratings. See paragraph 1.3 herein for details.

A.1.4 Recommended operating conditions. See paragraph 1.4 herein for details.

APPENDIX A
APPENDIX A FORMS A PART OF SMD 5962-99618

A.2 APPLICABLE DOCUMENTS.

A.2.1 Government specification, standards, and handbooks. The following specification, standards, and handbooks form a part of this drawing to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

DEPARTMENT OF DEFENSE SPECIFICATION

MIL-PRF-38535 - Integrated Circuits, Manufacturing, General Specification for.

DEPARTMENT OF DEFENSE STANDARD

MIL-STD-883 - Test Method Standard Microcircuits.

DEPARTMENT OF DEFENSE HANDBOOKS

MIL-HDBK-103 - List of Standard Microcircuit Drawings.
MIL-HDBK-780 - Standard Microcircuit Drawings.

(Copies of these documents are available online at http://quicksearch.dla.mil or from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094.)

A.2.2 Order of precedence. In the event of a conflict between the text of this drawing and the references cited herein, the text of this drawing takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

A.3 REQUIREMENTS

A.3.1 Item requirements. The individual item requirements for device classes Q and V shall be in accordance with MIL-PRF-38535 and as specified herein or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not affect the form, fit, or function as described herein.

A.3.2 Design, construction and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-PRF-38535 and herein and the manufacturer's QM plan for device classes Q and V.

A.3.2.1 Die physical dimensions. The die physical dimensions shall be as specified in A.1.2.4.1 and on figure A-1.

A.3.2.2 Die bonding pad locations and electrical functions. The die bonding pad locations and electrical functions shall be as specified in A.1.2.4.2 and on figure A-1.

A.3.2.3 Interface materials. The interface materials for the die shall be as specified in A.1.2.4.3 and on figure A-1.

A.3.2.4 Assembly related information. The assembly related information shall be as specified in A.1.2.4.4 and on figure A-1.

A.3.2.5 Radiation exposure circuit. The radiation exposure circuit shall be as defined in paragraph 3.2.5 herein.

A.3.3 Electrical performance characteristics and post-irradiation parameter limits. Unless otherwise specified herein, the electrical performance characteristics and post-irradiation parameter limits are as specified in table I of the body of this document.

A.3.4 Electrical test requirements. The wafer probe test requirements shall include functional and parametric testing sufficient to make the packaged die capable of meeting the electrical performance requirements in table I.

A.3.5 Marking. As a minimum, each unique lot of die, loaded in single or multiple stack of carriers, for shipment to a customer, shall be identified with the wafer lot number, the certification mark, the manufacturer's identification and the PIN listed in A.1.2 herein. The certification mark shall be a "QML" or "Q" as required by MIL-PRF-38535.

A.3.6 Certification of compliance. For device classes Q and V, a certificate of compliance shall be required from a QML-38535 listed manufacturer in order to supply to the requirements of this drawing (see A.6.4 herein). The certificate of compliance submitted to DLA Land and Maritime -VA prior to listing as an approved source of supply for this appendix shall affirm that the manufacturer's product meets, for device classes Q and V, the requirements of MIL-PRF-38535 and the requirements herein.

A.3.7 Certificate of conformance. A certificate of conformance as required for device classes Q and V in MIL-PRF-38535 shall be provided with each lot of microcircuit die delivered to this drawing.

A.4 VERIFICATION

A.4.1 Sampling and inspection. For device classes Q and V, die sampling and inspection procedures shall be in accordance with MIL-PRF-38535 or as modified in the device manufacturer's Quality Management (QM) plan. The modifications in the QM plan shall not affect the form, fit, or function as described herein.

A.4.2 Screening. For device classes Q and V, screening shall be in accordance with MIL-PRF-38535, and as defined in the manufacturer's QM plan. As a minimum, it shall consist of:

a. Wafer lot acceptance for class V product using the criteria defined in MIL-STD-883, method 5007.

b. 100% wafer probe (see paragraph A.3.4 herein).

c. 100% internal visual inspection to the applicable class Q or V criteria defined in MIL-STD-883, method 2010 or the alternate procedures allowed in MIL-STD-883, method 5004.

A.4.3 Conformance inspection.

A.4.3.1 Group E inspection. Group E inspection is required only for parts intended to be identified as radiation assured (see A.3.5 herein). RHA levels for device classes Q and V shall be as specified in MIL-PRF-38535. End point electrical testing of packaged die shall be as specified in table IIA herein. Group E tests and conditions are as specified in paragraphs 4.4.4, 4.4.4.1, 4.4.4.2, and 4.4.4.2.1 herein.

A.5 DIE CARRIER

A.5.1 Die carrier requirements. The requirements for the die carrier shall be accordance with the manufacturer's QM plan or as specified in the purchase order by the acquiring activity. The die carrier shall provide adequate physical, mechanical and electrostatic protection.

A.6 NOTES

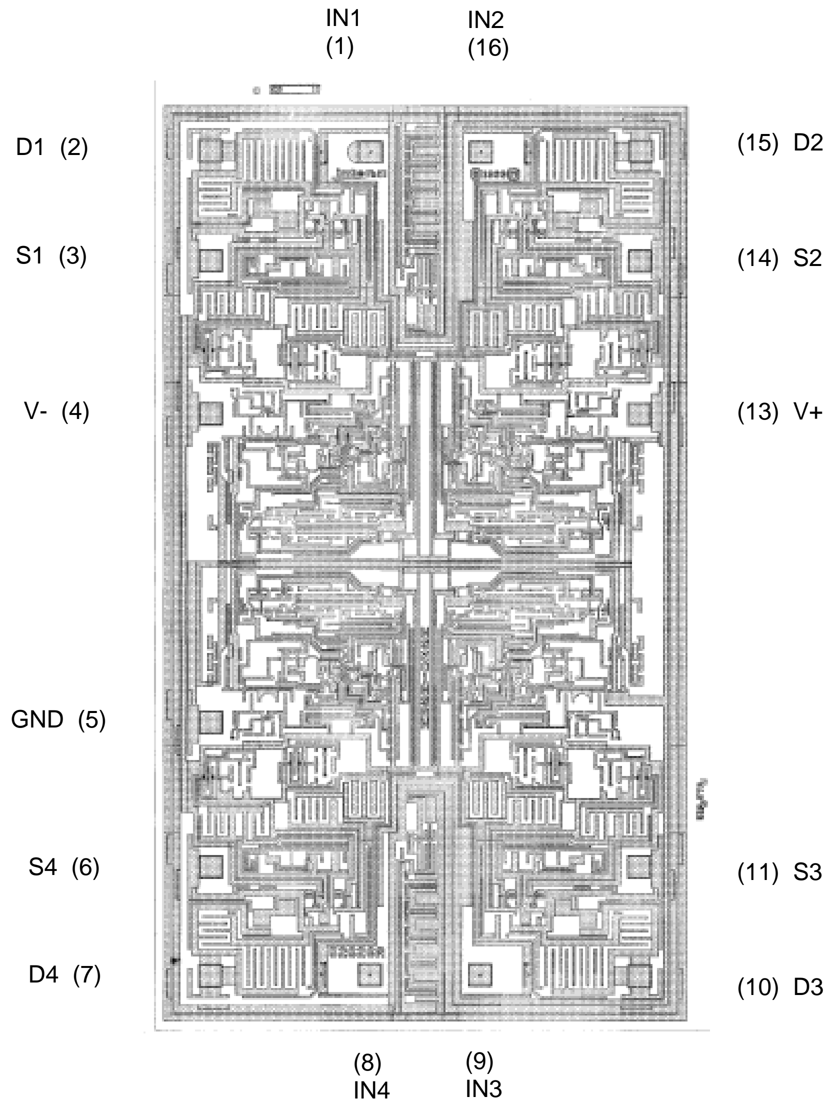
A.6.1 Intended use. Microcircuit die conforming to this drawing are intended for use in microcircuits built in accordance with MIL-PRF-38535 or MIL-PRF-38534 for government microcircuit applications (original equipment), design applications, and logistics purposes.

A.6.2 Comments. Comments on this appendix should be directed to DLA Land and Maritime -VA, Columbus, Ohio, 43218-3990 or telephone (614)-692-0540.

A.6.3 Abbreviations, symbols, and definitions. The abbreviations, symbols, and definitions used herein are defined in MIL-PRF-38535 and MIL-HDBK-1331.

A.6.4 Sources of supply for device classes Q and V. Sources of supply for device classes Q and V are listed in QML-38535. The vendors listed within MIL-HDBK-103 and QML-38535 have submitted a certificate of compliance (see A.3.6 herein) to DLA Land and Maritime -VA and have agreed to this drawing.

APPENDIX A
APPENDIX A FORMS A PART OF SMD 5962-99618



NOTE: Pad numbers reflect terminal numbers when placed in case outlines E and X (see Figure 1).

FIGURE A-1. Die bonding pad locations and electrical functions.

Die bonding pad locations and electrical functions

Die physical dimensions.
Die size: 4950 (195 mils) x 2970 (117 mils) microns
Die thickness: 19 mils ± 1 mils

Interface materials.
Top metallization: Al Si Cu 16 kÅ ± 2 kÅ
Backside metallization: None

Glassivation.
Type: PSG
Thickness: 8 kÅ ± 1 kÅ

Substrate: DI (dielectric isolation)

Assembly related information.
Substrate potential: Insulator
Special assembly instructions: None

FIGURE A-1. Die bonding pad locations and electrical functions - continued.

STANDARD MICROCIRCUIT DRAWING BULLETIN

DATE: 17-01-23

Approved sources of supply for SMD 5962-99618 are listed below for immediate acquisition information only and shall be added to MIL-HDBK-103 and QML-38535 during the next revision. MIL-HDBK-103 and QML-38535 will be revised to include the addition or deletion of sources. The vendors listed below have agreed to this drawing and a certificate of compliance has been submitted to and accepted by DLA Land and Maritime-VA. This information bulletin is superseded by the next dated revision of MIL-HDBK-103 and QML-38535. DLA Land and Maritime maintains an online database of all current sources of supply at https://landandmaritimeapps.dla.mil/Programs/Smcr/.
