- 1/ Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- 2/ The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- 3/ This current flows only when the output is in the high state and V_O > V_{CC}.
- 4/ The package thermal impedance is calculated in accordance with JESD 51-7.
- 5/ Long term high-temperature storage and/or extended use at maximum recommended operating conditions may result in a reduction of overall device life.
- 6/ All unused control inputs of the device must be held at V_{CC} or GND to ensure proper device operation.
