- 1/ Testing and other quality control techniques are used to the extent deemed necessary to assure product performance over the specified temperature range. Product may not necessarily be tested across the full temperature range and all parameters may not necessarily be tested. In the absence of specific parametric testing, product performance is assured by characterization and/or design.
- 2/ For device type 01, the temperature range is $-40^{\circ}\text{C} \leq T_A \leq +85^{\circ}\text{C}$.
For device type 02, the temperature range is $-55^{\circ}\text{C} \leq T_A \leq +125^{\circ}\text{C}$.
- 3/ For I/O ports, the parameter I_{oz} includes the input leakage current.
- 4/ This is the increase in supply current for each input that is at one of the specified TTL voltage levels, rather than at 0 or the associated V_{CC}.
- 5/ Typical values are measured at V_{CCA} = 3.3 V and V_{CCB} = 5 V, T_A = 25°C.

- All input pulses are supplied by generators having the following characteristics: $PRR \leq 10 \text{ MHz}$, $Z_o = 50 \Omega$, $t_r \leq 2 \text{ ns}$, $t_f \leq 2 \text{ ns}$.
- The outputs are measured one at a time, with one transaction per measurement.
- t_{PLZ} and t_{PHZ} are the same as t_{dis} .
- t_{PZL} and t_{PZH} are the same as t_{en} .
- t_{PLH} and t_{PHL} are the same as t_{pd} .
