

1. SCOPE

1.1 Scope. This drawing documents the general requirements of a high performance dual output, low dropout, voltage regulator microcircuit, with an operating temperature range of -55°C to +125°C.

1.2 Vendor Item Drawing Administrative Control Number. The manufacturer's PIN is the item of identification. The vendor item drawing establishes an administrative control number for identifying the item on the engineering documentation:

<u>V62/06617</u>	-	<u>01</u>	<u>X</u>	<u>E</u>
Drawing number		Device type (See 1.2.1)	Case outline (See 1.2.2)	Lead finish (See 1.2.3)

1.2.1 Device type.

<u>Device type</u>	<u>Generic</u>	<u>Circuit function</u>
01	TPS767D301-EP	Dual output, low dropout, voltage regulator

1.2.2 Case outline. The case outline are as specified herein.

<u>Outline letter</u>	<u>Number of pins</u>	<u>JEDEC PUB 95</u>	<u>Package style</u>
X	28	MO-153	Plastic small outline with thermal pad

1.2.3 Lead finishes. The lead finishes are as specified below or other lead finishes as provided by the device manufacturer:

<u>Finish designator</u>	<u>Material</u>
A	Hot solder dip
B	Tin-lead plate
C	Gold plate
D	Palladium
E	Gold flash palladium
F	Tin-lead alloy (BGA/CGA)
Z	Other

		REV C	PAGE 2

1.3 Absolute maximum ratings. 1/

Input voltage range (VI)	-0.3 V to 13.5 V 2/
Input voltage range (VI) :	
1IN, 2IN, \overline{EN} pins	-0.3 V to VI + 0.3 V
Output voltage (VO) :	
1OUT, 2OUT pins	7 V
\overline{RESET} pin	16.5 V
Peak output current	Internally limited
Electrostatic discharge (ESD) rating:	
Human body model (HBM)	2 kV
Continuous total power dissipation (PD)	See dissipation rating table
Operating virtual junction temperature range (TJ)	-55°C to +150°C
Storage temperature range (TSTG)	-65°C to +150°C

1.4 Recommended operating conditions. 3/

Input voltage range (VI):	
1IN, 2IN pins	2.7 V to 10 V 4/
Output current for each LDO	0 to 1 A 5/
Output voltage range (VO) :	
1OUT, 2OUT pins	1.5 V to 5.5 V
Operating virtual junction temperature (TJ)	-55°C to +125°C

1.5 Dissipation rating table. 6/

Package	Air flow (CFM)	TA ≤ 25°C power rating	Derating factor above TA = 25°C	TA = 70°C power rating	TA = 85°C power rating
X	0	3.58 W	3.58°C/W	1.97 W	1.43 W
	250	5.07 W	5.07°C/W	2.79 W	2.03 W

- 1/ Stresses beyond those listed under “absolute maximum rating” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- 2/ All voltage values are with respect to network ground terminal.
- 3/ Use of this product beyond the manufacturers design rules or stated parameters is done at the user’s risk. The manufacturer and/or distributor maintain no responsibility or liability for product used beyond the stated limits.
- 4/ To calculate the minimum input voltage for maximum output current, use the following equation:

$$V_{I(\min)} = V_{O(\max)} + V_{DO(\max \text{ load})}$$
- 5/ Continuous output current and operating junction temperature are limited by internal protection circuitry, but it is not recommended that the device operate under conditions beyond those specified in this paragraph for extended periods of time.
- 6/ This parameter is measured with the recommended copper heat-sink pattern on a four layer printed circuit board (PCB), 1 ounce copper on 4 inch x 4 inch ground layer. For more information, refer to manufacturer technical brief literature number SLMA002.

2. APPLICABLE DOCUMENTS

JEDEC Solid State Technology Association

JEDEC PUB 95 – Registered and Standard Outlines for Semiconductor Devices

(Copies of these documents are available online at <https://www.jedec.org>.)

3. REQUIREMENTS

3.1 Marking. Parts shall be permanently and legibly marked with the manufacturer's part number as shown in 6.3 herein and as follows:

- A. Manufacturer's name, CAGE code, or logo
- B. Pin 1 identifier
- C. ESDS identification (optional)

3.2 Unit container. The unit container shall be marked with the manufacturer's part number and with items A and C (if applicable) above.

3.3 Electrical characteristics. The maximum and recommended operating conditions and electrical performance characteristics are as specified in 1.3, 1.4, and table I herein.

3.4 Design, construction, and physical dimension. The design, construction, and physical dimensions are as specified herein.

3.5 Diagrams.

3.5.1 Case outline. The case outline shall be as shown in 1.2.2 and figure 1.

3.5.2 Terminal connections. The terminal connections shall be as shown in figure 2.

3.5.3 Block diagram. The block diagram shall be as shown in figure 3.

3.5.4 Timing waveforms. The timing waveforms shall be as shown in figure 4.

TABLE I. Electrical performance characteristics – Continued. 1/

Test	Symbol	Conditions 2/	Temperature, T _J	Device type	Limits		Unit
					Min	Max	
Reset section							
Minimum input voltage for valid RESET		I _O (RESET) = 300 mA	+25°C	01	1.1 typical		V
Trip threshold voltage		V _O decreasing	-55°C to +125°C	01	92	98	%V
Hysteresis voltage		Measured at V _O	+25°C	01	0.5 typical		%V
Output low voltage		V _I = 2.7 V, I _O (RESET) = 1 mA	-55°C to +125°C	01		0.4	V
					0.15 typical		
Leakage current		V(RESET) = 7 V	-55°C to +125°C	01		1	μA
RESET time out delay			+25°C	01	200 typical		mV

1/ Testing and other quality control techniques are used to the extent deemed necessary to assure product performance over the specified temperature range. Product may not necessarily be tested across the full temperature range and all parameters may not necessarily be tested. In the absence of specific parametric testing, product performance is assured by characterization and/or design.

2/ Unless otherwise specified, V_I = V_O(nominal) + 1 V, I_O = 1 mA, EN = 0, and C_O = 10 μF.

3/ The minimum I_N operating voltage is 2.7 V or V_O(typical) + 1 V, whichever is greater. The maximum I_N voltage is 10 V.

4/ If V_O ≤ 1.8 V then V_I(min) = 2.7 V, V_I(max) = 10 V:

$$\text{Line regulation (mV)} = (\% / V) \times (V_O (V_{I(\text{max})} - 2.7 V) / 100) \times 1000$$

If V_O ≥ 2.5 V then V_I(min) = V_O + 1 V, and V_I(max) = 10 V:

$$\text{Line regulation (mV)} = (\% / V) \times (V_O (V_{I(\text{max})} - (V_O + 1 V)) / 100) \times 1000$$

5/ I_N voltage equals V_O(typical) – 100 mV: adjustable output voltage set to 3.3 V nominal with external resistor divider. Dropout voltage of 1.8 V and 2.5 V is limited by input voltage range limitations.

NOTES:

1. V_{res} is the minimum input voltage for a valid $\overline{\text{RESET}}$. The symbol V_{res} is not currently listed within EIA or JEDEC standards for semiconductor symbology.
2. V_{IT-} - Trip voltage is typically 5% lower than the output voltage (95% V_o).

4. VERIFICATION

4.1 Product assurance requirements. The manufacturer is responsible for performing all inspection and test requirements as indicated in their internal documentation. Such procedures should include proper handling of electrostatic sensitive devices, classification, packaging, and labeling of moisture sensitive devices, as applicable.

5. PREPARATION FOR DELIVERY

5.1 Packaging. Preservation, packaging, labeling, and marking shall be in accordance with the manufacturer's standard commercial practices for electrostatic discharge sensitive devices.

6. NOTES

6.1 ESDS. Devices are electrostatic discharge sensitive and are classified as ESDS class 1 minimum.

6.2 Configuration control. The data contained herein is based on the salient characteristics of the device manufacturer's data book. The device manufacturer reserves the right to make changes without notice. This drawing will be modified as changes are provided.

6.3 Suggested source(s) of supply. Identification of the suggested source(s) of supply herein is not to be construed as a guarantee of present or continued availability as a source of supply for the item. DLA Land and Maritime maintains an online database of all current sources of supply at <https://landandmaritimeapps.dla.mil/programs/smcr/>.
