

1. SCOPE

1.1 Scope. This drawing documents the general requirements of a high performance, low power, RS-485/RS-422 transmitter microcircuit, with an operating temperature range of -55°C to +125°C.

1.2 Vendor Item Drawing Administrative Control Number. The manufacturers PIN is the item of identification. The vendor item drawing establishes an administrative control number for identifying the item on the engineering documentation:

1.2.1 Device type(s).

<u>Device type</u>	<u>Generic</u>	<u>Circuit function</u>
01	ISL3298E	Low power, RS-485/RS-422 transmitter

1.2.2 Case outline(s). The case outline(s) are as specified herein.

<u>Outline letter</u>	<u>Number of pins</u>	<u>JEDEC PUB 95</u>	<u>Package style</u>
X	8	See figure 1	Thin dual flat leadless plastic package

1.2.3 Lead finishes. The lead finishes are as specified below or other lead finishes as provided by the device manufacture:

<u>Finish designator</u>	<u>Material</u>
A	Hot solder dip
B	Tin-lead plate
C	Gold plate
D	Palladium
E	Gold flash palladium
Z	Other

<b>DEFENSE SUPPLY CENTER, COLUMBUS COLUMBUS, OHIO</b>	SIZE <b>A</b>	CODE IDENT NO. <b>16236</b>	DWG NO. <b>V62/10602</b>
		REV	PAGE 2

1.3 Absolute maximum ratings. 1/

$V_{CC}$ to GND .....	-0.3 V to 7 V
$V_L$ to GND .....	-0.3 V to $V_{CC} + 0.3$ V
Input voltages:	
Pins DI, DE .....	-0.3 V to 7 V
Output voltages:	
Pins Y, Z ( $V_{CC} \leq 3.6$ V) .....	-8 V to +13 V
Pins Y, Z ( $V_{CC} > 3.6$ V) .....	-0.5 V to $V_{CC} + 0.5$ V
Short circuit duration:	
Pins Y, Z ( $V_{CC} \leq 3.6$ V) .....	Continuous
Pins Y, Z ( $V_{CC} > 3.6$ V) <u>2/</u> .....	1 second at < 300 mA
ESD rating .....	See table I
Junction temperature range ( $T_J$ ) .....	150°C
Storage temperature range ( $T_{STG}$ ).....	-65°C to 150°C
Thermal resistance, junction to case ( $\theta_{JC}$ ): <u>3/</u> <u>4/</u>	
X package .....	8°C/W
Thermal resistance, junction to ambient ( $\theta_{JA}$ ): <u>3/</u> <u>4/</u>	
X package .....	65°C/W

1.4 Recommended operating conditions. 5/

Operating free-air temperature range ( $T_A$ ).....	-55°C to +125°C
---	-----------------

1/ Stresses beyond those listed under “absolute maximum rating” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

2/ Due to the high short circuit current at  $V_{CC} > 3.6$  V, the outputs must not be shorted outside the range of GND to  $V_{CC}$  or damage may occur. To prevent excessive power dissipation that may damage the output, the short circuit current should be limited to  $\leq 300$  mA during testing. It is best to use an external resistor for this purpose, since the current limiting on the  $V_O$  supply may respond too slowly to protect the output.

3/  $\theta_{JA}$  is measured in free air with the component mounted on a high effective thermal conductivity test board with “direct attach” features. See manufacturer’s technical brief TB379.

4/ For  $\theta_{JC}$ , the “case temp” location is the center of the exposed metal pad on the package underside.

5/ Use of this product beyond the manufacturers design rules or stated parameters is done at the user’s risk. The manufacturer and/or distributor maintain no responsibility or liability for product used beyond the stated limits.

<b>DEFENSE SUPPLY CENTER, COLUMBUS COLUMBUS, OHIO</b>	<b>SIZE A</b>	<b>CODE IDENT NO. 16236</b>	<b>DWG NO. V62/10602</b>

## 2. APPLICABLE DOCUMENTS

JEDEC PUB 95 – Registered and Standard Outlines for Semiconductor Devices

(Applications for copies should be addressed to the Electronic Industries Alliance, 2500 Wilson Boulevard, Arlington, VA 22201-3834 or online at <http://www.jedec.org>)

IEC 61000-4-2 – Electromagnetic Compatibility (EMC) – Part 4-2  
Testing and Measurement Techniques – Electrostatic Discharge Immunity Test

(Applications for copies should be addressed to the International Electrotechnical Commission Regional Centre for North America 446 Main Street, 16<sup>th</sup> Floor, Worcester, MA 01608 or online at <http://www.iec.ch>)

## 3. REQUIREMENTS

3.1 Marking. Parts shall be permanently and legibly marked with the manufacturer's part number as shown in 6.3 herein and as follows:

- A. Manufacturer's name, CAGE code, or logo
- B. Pin 1 identifier
- C. ESDS identification (optional)

3.2 Unit container. The unit container shall be marked with the manufacturer's part number and with items A and C (if applicable) above.

3.3 Electrical characteristics. The maximum and recommended operating conditions and electrical performance characteristics are as specified in 1.3, 1.4, and table I herein.

3.4 Design, construction, and physical dimension. The design, construction, and physical dimensions are as specified herein.

3.5 Diagrams.

3.5.1 Case outline(s). The case outline(s) shall be as shown in 1.2.2 and figure 1.

3.5.2 Terminal connections. The terminal connections shall be as shown in figure 2.

3.5.3 Truth table. The truth table shall be as shown in figure 3.

3.5.4 Timing waveforms and test circuit. The timing waveforms and test circuit shall be as shown in figures 4, 5, 6, and 7.

		REV	PAGE 8

TABLE I. Electrical performance characteristics – Continued.

- 1/ Testing and other quality control techniques are used to the extent deemed necessary to assure product performance over the specified temperature range. Product may not necessarily be tested across the full temperature range and all parameters may not necessarily be tested. In the absence of specific parametric testing, product performance is assured by characterization and/or design.
- 2/ Unless otherwise specified,  $V_{CC} = 3.0\text{ V to }5.5\text{ V}$ ,  $V_L = V_{CC}$ . Typical values are at  $T_A = +25^\circ\text{C}$ . All currents into device pins are positive; all currents out of device pins are negative. All voltages are referenced to device ground.
- 3/ Parts are 100% tested at  $+25^\circ\text{C}$ . Over-temperature limits established by characterization and are not production tested.
- 4/ Typical values are measured at  $V_{CC} = 3.3\text{ V}$  for parameters specified with  $3\text{ V} \leq V_{CC} \leq 3.6\text{ V}$ , and are measured at  $V_{CC} = 5\text{ V}$  for parameters specified with  $4.5\text{ V} \leq V_{CC} \leq 5.5\text{ V}$ . If  $V_{CC}$  isn't specified, then a single "typical" entry applies to both  $V_{CC} = 3.3\text{ V}$  and  $5\text{ V}$ .
- 5/ If the driver enable function isn't needed, connect DE to  $V_{CC}$  (or  $V_L$ ) through a  $1\text{ k}\Omega$  to  $3\text{ k}\Omega$  resistor.
- 6/ Applies to peak current.
- 7/ Due to the high short circuit current at  $V_{CC} > 3.6\text{ V}$ , the outputs must not be shorted outside the range of GND to  $V_{CC}$  or damage may occur. To prevent excessive power dissipation that may damage the output, the short circuit current should be limited to  $\leq 300\text{ mA}$  during testing. It is best to use an external resistor for this purpose, since the current limiting on the  $V_O$  supply may respond too slowly to protect the output.
- 8/  $t_{SKPP}$  is the magnitude of the difference in propagation delays of the specified terminals of two units tested with identical test conditions ( $V_{CC}$ , temperature, etc.).

NOTES:

1. Controlling dimensions are millimeter, inch dimensions are given for reference only.
2. Dimensioning and tolerancing conform to ASME Y14.5-1994.
3. Dimension b applies to the metalized terminal and is measured between 0.25 mm and 0.30 mm from the terminal tip.
4. The configuration of the pin number 1 identifier is optional, but must be located within the zone indicated. the pin number 1 identifier may be either a mold or mark feature.
5. Dimesions D1 and E1 are for the exposed pads which provide improved electrical and thermal performance.
6. Nominal dimensions are provided to assist with printed circuit board land pattern design efforts, see manufacturer's technical brief TB389.
7. N is the number of terminals.

Device type	01
Case outlines	X
Terminal number	Terminal symbol
1	V <sub>L</sub>
2	DE
3	DI
4	GND
5	GND
6	Y
7	Z
8	V <sub>CC</sub>

Terminal symbol	Description
DE	Driver output enable. The driver outputs, Y and Z, are enabled by bringing DE high, and are high impedance when DE is low. If the driver enable function isn't needed, connect DE to V <sub>CC</sub> (or V <sub>L</sub> ) through a 1 kΩ to 3 kΩ resistor.
DI	Driver input. A low on DI forces output Y low and output Z high. Similarly, a high on DI forces output Y high and output Z low.
GND	Ground connection. This is also the potential of the thin dual flat leadless package thermal pad.
Y	±15 kV human body model, ±7 kV IEC61000 (contact method) ESD Protected RS-485/422 level, noninverting transmitter output.
Z	±15 kV human body model, ±7 kV IEC61000 (contact method) ESD Protected RS-485/422 level, inverting transmitter output.
V <sub>CC</sub>	System power supply input (3.0 V to 5.5 V). On devices with a V <sub>L</sub> pin, power-up V <sub>CC</sub> first.
V <sub>L</sub>	Logic-level supply which sets the V <sub>IL</sub> /V <sub>IH</sub> levels for the DI and DE pins. Power-up this supply after V <sub>CC</sub> , and keep V <sub>L</sub> ≤ V <sub>CC</sub> .

4. VERIFICATION

4.1 Product assurance requirements. The manufacturer is responsible for performing all inspection and test requirements as indicated in their internal documentation. Such procedures should include proper handling of electrostatic sensitive devices, classification, packaging, and labeling of moisture sensitive devices, as applicable.

5. PREPARATION FOR DELIVERY

5.1 Packaging. Preservation, packaging, labeling, and marking shall be in accordance with the manufacturer's standard commercial practices for electrostatic discharge sensitive devices.

6. NOTES

6.1 ESDS. Devices are electrostatic discharge sensitive and are classified as ESDS class 1 minimum.

6.2 Configuration control. The data contained herein is based on the salient characteristics of the device manufacturer's data book. The device manufacturer reserves the right to make changes without notice. This drawing will be modified as changes are provided.

6.3 Suggested source(s) of supply. Identification of the suggested source(s) of supply herein is not to be construed as a guarantee of present or continued availability as a source of supply for the item.
