

1. SCOPE

1.1 Scope. This drawing documents the general requirements of a high performance low distortion, wide bandwidth voltage feedback clamp amplifier microcircuit, with an operating temperature range of -55°C to +105°C.

1.2 Vendor Item Drawing Administrative Control Number. The manufacturer's PIN is the item of identification. The vendor item drawing establishes an administrative control number for identifying the item on the engineering documentation:

<u>V62/16612</u> Drawing number	-	<u>01</u> Device type (See 1.2.1)	<u>X</u> Case outline (See 1.2.2)	<u>E</u> Lead finish (See 1.2.3)
---------------------------------------	---	---	---	--

1.2.1 Device type(s).

<u>Device type</u>	<u>Generic</u>	<u>Circuit function</u>
01	AD8037-EP	Low distortion, wide bandwidth voltage feedback clamp amplifier

1.2.2 Case outline(s). The case outline(s) are as specified herein.

<u>Outline letter</u>	<u>Number of pins</u>	<u>JEDEC PUB 95</u>	<u>Package style</u>
X	8	MS-012-AA	Small outline package

1.2.3 Lead finishes. The lead finishes are as specified below or other lead finishes as provided by the device manufacturer:

<u>Finish designator</u>	<u>Material</u>
A	Hot solder dip
B	Tin-lead plate
C	Gold plate
D	Palladium
E	Gold flash palladium
F	Tin-lead alloy (BGA/CGA)
Z	Other

1.3 Absolute maximum ratings. 1/

Supply voltage (VS)	12.6 V
Power dissipation (PD)	See figure 3
Voltage swing x bandwidth product	350 V- MHz
Common mode input voltage	±VS
High clamping voltage (VH) – Input voltage (VIN) 	≤ 6.3 V
Low clamping voltage (VL) – VIN 	≤ 6.3 V
Differential input voltage	±1.2 V
Storage temperature range (TSTG)	-65°C to +125°C
Lead temperature (soldering, 10 seconds)	+300°C
Junction temperature range (TJ)	+150°C 2/
Thermal resistance, junction to ambient (θJA)	155°C/W

1.4 Recommended operating conditions. 3/

Supply voltage range (VS)	±5 V
Operating free-air temperature range (TA)	-55°C to +105°C

- 1/ Stresses beyond those listed under “absolute maximum rating” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- 2/ Exceeding a junction temperature of +175°C for an extended period can result in device failure.
- 3/ Use of this product beyond the manufacturers design rules or stated parameters is done at the user’s risk. The manufacturer and/or distributor maintain no responsibility or liability for product used beyond the stated limits.

2. APPLICABLE DOCUMENTS

JEDEC Solid State Technology Association

JEDEC PUB 95 – Registered and Standard Outlines for Semiconductor Devices

(Copies of these documents are available online at <https://www.jedec.org>.)

3. REQUIREMENTS

3.1 Marking. Parts shall be permanently and legibly marked with the manufacturer's part number as shown in 6.3 herein and as follows:

- A. Manufacturer's name, CAGE code, or logo
- B. Pin 1 identifier
- C. ESDS identification (optional)

3.2 Unit container. The unit container shall be marked with the manufacturer's part number and with items A and C (if applicable) above.

3.3 Electrical characteristics. The maximum and recommended operating conditions and electrical performance characteristics are as specified in 1.3, 1.4, and table I herein.

3.4 Design, construction, and physical dimension. The design, construction, and physical dimensions are as specified herein.

3.5 Diagrams.

3.5.1 Case outline. The case outline shall be as shown in 1.2.2 and figure 1.

3.5.2 Terminal connections. The terminal connections shall be as shown in figure 2.

3.5.3 Power dissipation graph. The power dissipation graph shall be as shown in figure 3.

TABLE I. Electrical performance characteristics. 1/

Test	Symbol	Conditions 2/	Temperature, TA	Device type	Limits		Unit
					Min	Max	
Dynamic performance.							
Small signal bandwidth at -3 dB		VOUT ≤ 0.4 Vp-p	+25°C	01	200		MHz
					270 typical		
Large signal 3/ bandwidth at -3 dB		VOUT = 3.5 Vp-p	+25°C	01	160		MHz
					190 typical		
Bandwidth for 0.1 dB flatness		VOUT ≤ 0.4 Vp-p, RF = 274 Ω	+25°C	01	130 typical		MHz
Slew rate, average ±		VOUT = 4 V step, 10% to 90%	+25°C	01	1100		V/μs
					1500 typical		
Rise/fall time		VOUT = 0.5 V step, 10% to 90%	+25°C	01	1.2 typical		ns
		VOUT = 4 V step, 10% to 90%			2.2 typical		
Settling time to 0.1%		VOUT = 2 V step	+25°C	01	10 typical		ns
Settling time to 0.01%		VOUT = 2 V step	+25°C	01	16 typical		ns
Noise/harmonic performance.							
Second harmonic distortion		2 Vpp, 20 MHz, RL = 100 Ω	+25°C	01		-45	dBc
					-52 typical		
		2 Vpp, 20 MHz, RL = 500 Ω	+25°C		-65		
				-72 typical			
Third harmonic distortion		2 Vpp, 20 MHz, RL = 100 Ω	+25°C	01		-63	dBc
					-70 typical		
		2 Vpp, 20 MHz, RL = 500 Ω	+25°C		-73		
				-80 typical

1/ Testing and other quality control techniques are used to the extent deemed necessary to assure product performance over the specified temperature range. Product may not necessarily be tested across the full temperature range and all parameters may not necessarily be tested. In the absence of specific parametric testing, product performance is assured by characterization and/or design.

2/ Unless otherwise specified, V_S = ±5 V, resistance load (R_L) = 100 Ω, gain = +2, and V_H, V_L open.

3/ See the absolute maximum ratings section.

4/ Nonlinearity is defined as the voltage delta between the set input clamp voltage (V_H or V_L) and the voltage at which V_{OUT} starts deviating from V_{IN}.

5/ Measured with respect to the inverting input.

4. VERIFICATION

4.1 Product assurance requirements. The manufacturer is responsible for performing all inspection and test requirements as indicated in their internal documentation. Such procedures should include proper handling of electrostatic sensitive devices, classification, packaging, and labeling of moisture sensitive devices, as applicable.

5. PREPARATION FOR DELIVERY

5.1 Packaging. Preservation, packaging, labeling, and marking shall be in accordance with the manufacturer's standard commercial practices for electrostatic discharge sensitive devices.

6. NOTES

6.1 ESDS. Devices are electrostatic discharge sensitive and are classified as ESDS class 1 minimum.

6.2 Configuration control. The data contained herein is based on the salient characteristics of the device manufacturer's data book. The device manufacturer reserves the right to make changes without notice. This drawing will be modified as changes are provided.

6.3 Suggested source(s) of supply. Identification of the suggested source(s) of supply herein is not to be construed as a guarantee of present or continued availability as a source of supply for the item. DLA Land and Maritime maintains an online database of all current sources of supply at <https://landandmaritimeapps.dla.mil/programs/smcr/>.

Vendor item drawing administrative control number <u>1/</u>	Device manufacturer CAGE code	Mode of transportation and quantity	Vendor part number
