

1. SCOPE

1.1 Scope. This drawing documents the general requirements of a high performance 0.1 GHz to 3.0 GHz, 1 dB least significant bit (LSB), 5 bit, gallium arsenide (GaAs) digital step attenuator microcircuit, with an operating temperature range of -55°C to +125°C.

1.2 Vendor Item Drawing Administrative Control Number. The manufacturer's PIN is the item of identification. The vendor item drawing establishes an administrative control number for identifying the item on the engineering documentation:

<u>V62/17617</u> Drawing number	-	<u>01</u> Device type (See 1.2.1)	<u>X</u> Case outline (See 1.2.2)	<u>E</u> Lead finish (See 1.2.3)
---------------------------------------	---	-----------------------------------------	-----------------------------------------	----------------------------------------

1.2.1 Device type.

<u>Device type</u>	<u>Generic</u>	<u>Circuit function</u>
01	HMC470A-EP	0.1 GHz to 3.0 GHz, 1 dB LSB, 5 bit, GaAs digital step attenuator

1.2.2 Case outline. The case outline are as specified herein.

<u>Outline letter</u>	<u>Number of pins</u>	<u>JEDEC PUB 95</u>	<u>Package style</u>
X	16	MO-220-VEED-4	Lead frame chip scale package

1.2.3 Lead finishes. The lead finishes are as specified below or other lead finishes as provided by the device manufacturer:

<u>Finish designator</u>	<u>Material</u>
A	Hot solder dip
B	Tin-lead plate
C	Gold plate
D	Palladium
E	Gold flash palladium
F	Tin-lead alloy (BGA/CGA)
Z	Other

		REV A	PAGE 2

1.3 Absolute maximum ratings. 1/

Supply voltage (VDD) .....	7 V
Digital control input voltage .....	-1 V to VDD + 1 V
RF input power <u>2/</u> :	
(All attenuation states, f = 250 MHz to 3 GHz, TCASE = 85°C)	
VDD = 3 V .....	25 dBm
VDD = 5 V .....	27 dBm
Continuous power dissipation (PD) : <u>3/</u>	
TCASE = 85°C .....	0.5 W
TCASE = 125°C .....	0.19 W
Junction temperature range (TJ) .....	150°C
Storage temperature range (TSTG) .....	-65°C to +150°C
Reflow <u>4/</u> (moisture sensitivity level 3 (MSL3) rating) .....	260°C
Thermal resistance, junction to case ( $\theta_{JC}$ ) .....	130°C/W <u>5/</u> <u>6/</u>
Thermal resistance, junction to ambient ( $\theta_{JA}$ ) .....	297°C/W <u>5/</u>
Electrostatic discharge (ESD) rating:	
Human body model (HDM) .....	250 V (class 1A)

1.4 Recommended operating conditions. 7/

Supply voltage range (VDD) .....	3 V to 5 V
Operating case temperature range (TC) .....	-55°C to +125°C

- 
- 1/ Stresses beyond those listed under “absolute maximum rating” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
  - 2/ For power derating at frequencies less than 250 MHz, see figure 3.
  - 3/ See figure 4.
  - 4/ See the ordering guide in the manufacturer’s datasheet for more information.
  - 5/ Thermal impedance simulated values are based on a JEDEC 2S2P thermal test board with five thermal vias. See JEDEC JESD-51.
  - 6/ The device is set to maximum attenuation state.
  - 7/ Use of this product beyond the manufacturers design rules or stated parameters is done at the user’s risk. The manufacturer and/or distributor maintain no responsibility or liability for product used beyond the stated limits.

2. APPLICABLE DOCUMENTS

JEDEC Solid State Technology Association

- JEDEC JESD51 – Methodology for the Thermal Measurement of Component Packages (Single Semiconductor Device)
- JEDEC PUB 95 – Registered and Standard Outlines for Semiconductor Devices

(Copies of these documents are available online at <https://www.jedec.org>.)

3. REQUIREMENTS

3.1 Marking. Parts shall be permanently and legibly marked with the manufacturer’s part number as shown in 6.3 herein and as follows:

- A. Manufacturer’s name, CAGE code, or logo
- B. Pin 1 identifier
- C. ESDS identification (optional)

3.2 Unit container. The unit container shall be marked with the manufacturer’s part number and with items A and C (if applicable) above.

3.3 Electrical characteristics. The maximum and recommended operating conditions and electrical performance characteristics are as specified in 1.3, 1.4, and table I herein.

3.4 Design, construction, and physical dimension. The design, construction, and physical dimensions are as specified herein.

3.5 Diagrams.

3.5.1 Case outline. The case outline shall be as shown in 1.2.2 and figure 1.

3.5.2 Terminal connections. The terminal connections shall be as shown in figure 2.

3.5.3 Truth table. The truth table shall be as shown in figure 3.

3.5.4 Power derating at frequencies less than 250 MHz graph. The power derating at frequencies less than 250 MHz graph shall be as shown in figure 4.

3.5.5 Maximum power dissipation versus case temperature graph. The maximum power dissipation versus case temperature graph shall be as shown in figure 5.

3.5.6 Digital control input interface circuit. The digital control input interface circuit shall be as shown in figure 6.

3.5.7 RF1, RF2 interface circuit. The RF1, RF2 interface circuit shall be as shown in figure 7.

3.5.8 Input P0.1 dB versus frequency at minimum attenuation state for various temperatures graph with supply voltage at 5 V. The input P0.1 dB versus frequency at minimum attenuation state for various temperatures graph with supply voltage at 5 V shall be as shown in figure 8.

3.5.9 Input P0.1 dB versus frequency at minimum attenuation state for various temperatures graph with supply voltage at 3 V. The input P0.1 dB versus frequency at minimum attenuation state for various temperatures graph with supply voltage at 3 V shall be as shown in figure 9.

TABLE I. Electrical performance characteristics – Continued. 1/

Test	Symbol	Conditions <u>2/</u>	Temperature, T <sub>A</sub>	Device type	Limits		Unit
					Min	Max	
Switching characteristics. Between all attenuation states.							
Rise and fall time	t <sub>RISE</sub> , t <sub>FALL</sub>	10% to 90% of RF output	25°C	01	50 typical		ns
On and off time	t <sub>ON</sub> , t <sub>OFF</sub>	50% V <sub>CTL</sub> to 90% of RF output	25°C	01	70 typical		ns
Input linearity, <u>3/</u> 0.1 dB compression	P <sub>0.1dB</sub>	All attenuation states, 250 MHz to 3.0 GHz, V <sub>DD</sub> = 3 V	25°C	01	25 typical		dBm
		All attenuation states, 250 MHz to 3.0 GHz, V <sub>DD</sub> = 5 V			27 typical		
Input linearity, <u>3/</u> third order intercept	IP <sub>3</sub>	10 dBm per tone, 1 MHz spacing	25°C	01	50 typical		dBm
Supply current	I <sub>DD</sub>		25°C	01	1.7 typical		mA
Digital control inputs. V <sub>1</sub> to V <sub>5</sub> pins							
Low voltage	V <sub>INL</sub>		25°C	01	0	0.8	V
High voltage	V <sub>INH</sub>		25°C	01	2.0	V <sub>DD</sub>	V
Low current	I <sub>INL</sub>		25°C	01	1 typical		μA
High current	I <sub>INH</sub>		25°C	01	40 typical		μA

1/ Testing and other quality control techniques are used to the extent deemed necessary to assure product performance over the specified temperature range. Product may not necessarily be tested across the full temperature range and all parameters may not necessarily be tested. In the absence of specific parametric testing, product performance is assured by characterization and/or design.

2/ Unless otherwise specified, V<sub>DD</sub> = 3 V to 5 V, V<sub>1</sub> to V<sub>5</sub> control pins voltage (V<sub>CTL</sub>) = 0 V or V<sub>DD</sub>, T<sub>CASE</sub> = 25°C, 50 Ω system.

3/ Input linearity performance degrades at frequencies less than 250 MHz; see figure 8 and figure 9.

Device type	01	
Case outline	X	
Terminal number	Terminal symbol	Description
1	VDD	Power supply. See figure 6 for the interface schematic.
2	RF1	RF input or output of the attenuator. The RF1 pin is dc coupled to VDD and ac matched to 50 $\Omega$ . An external dc blocking capacitor is required. Select the capacitor value for the lowest frequency of operation. See figure 7 for the interface schematic.
3	NIC	Not internally connected. These pins are not internally connected; however, all data shown herein was measured when these pins were connected to the RF/dc ground of the evaluation board.
4	ACG1	AC grounding capacitor pins. Leave these pins not connected when operating above 700 MHz. For frequencies less than 700 MHz, connect capacitors larger than 100 pF as close to the ACGx pins as possible.
5	ACG2	
6	ACG3	
7	ACG4	
8	ACG5	
9	ACG6	
10	NIC	Not internally connected. These pins are not internally connected; however, all data shown herein was measured when these pins were connected to the RF/dc ground of the evaluation board.
11	RF2	RF input or output of the attenuator. The RF2 pin is dc coupled to VDD and ac matched to 50 $\Omega$ . An external dc blocking capacitor is required. Select the capacitor value for the lowest frequency of operation. See figure 7 for the interface schematic.
12	V1	Parallel control voltage inputs. These pins select the required attenuation see figure 3. See figure 6 for the interface schematic.
13	V2	
14	V3	
15	V4	
16	V5	
	EPAD	Exposed pad. The exposed pad must be connected to ground for proper operation.

FIGURE 2. Terminal connections.

4. VERIFICATION

4.1 Product assurance requirements. The manufacturer is responsible for performing all inspection and test requirements as indicated in their internal documentation. Such procedures should include proper handling of electrostatic sensitive devices, classification, packaging, and labeling of moisture sensitive devices, as applicable.

5. PREPARATION FOR DELIVERY

5.1 Packaging. Preservation, packaging, labeling, and marking shall be in accordance with the manufacturer’s standard commercial practices for electrostatic discharge sensitive devices.

6. NOTES

6.1 ESDS. Devices are electrostatic discharge sensitive and are classified as ESDS class 1 minimum.

6.2 Configuration control. The data contained herein is based on the salient characteristics of the device manufacturer’s data book. The device manufacturer reserves the right to make changes without notice. This drawing will be modified as changes are provided.

6.3 Suggested source(s) of supply. Identification of the suggested source(s) of supply herein is not to be construed as a guarantee of present or continued availability as a source of supply for the item. DLA Land and Maritime maintains an online database of all current sources of supply at <https://landandmaritimeapps.dla.mil/programs/smcr/>.

Vendor item drawing administrative control number <u>1/</u>	Device manufacturer CAGE code	Mode of transportation and quantity	Top side marking	Vendor part number
